1. Modern Systems for Software Development

1.1 Introduction

Modern Systems for Software Development is a dedicated software firm with a core focus on delivering software development, analysis, and implementation services that adhere to global standards. Our mission is to craft cutting-edge software solutions that meet the complex needs of our clients, ensuring quality and excellence in every project we undertake. By integrating international best practices into our processes, we strive to set a benchmark in the software industry.

Modern Systems for Software Development has innovated a healthcare software solution designed to streamline online services for medical professionals and pharmacies. This platform also serves as a vital tool for medical sales representatives. Crucially, it is engineered with the general public in mind, allowing them to engage with the system for their healthcare needs. Medical practitioners and pharmacists utilize this system to efficiently locate and serve patients, ensuring accurate and timely distribution of medications and services.

The platform is designed to provide a comprehensive suite of features, encompassing various medical fields such as internal medicine among others. Additionally, it will offer an extensive directory of over 189,000 commonly used medications, meticulously categorized by country for universal accessibility.

Visit Clinic provides a suite of general modules, including an accounting module with a comprehensive general ledger to track income and expenses for clinics and pharmacies. Additional modules are available within the system. To access detailed information, please proceed with registration.

Modern Systems for Software Development provides comprehensive software analysis services adhering to the highest standards for both private and public entities. Utilizing frameworks like the Information Technology Infrastructure Library (ITIL), which is renowned globally and tailored for IT services, they offer a suite of about twenty-six business processes. Additionally, ITIL offers a range of professional certifications catering to various expertise levels, from beginners to experts.

Modern Systems for Software Development provide comprehensive business analysis, aiding organizations in adopting processes aligned with global standards. Additionally, they offer specialized software solutions for processes like incident and knowledge management, enhancing operational efficiency and information governance.

The founder of Modern Systems for Software Development previously established a successful track record with notable entities such as Microsoft, Horvath, and Link Dot Net within a governmental framework.

The Capability Maturity Model Integration (CMMI) is a globally recognized standard that aims to enhance business processes, enabling organizations to conduct their operations more systematically. It encompasses approximately twenty-two distinct business processes. The proprietor of a company has been involved in a significant CMMI transformation initiative within governmental entities. To disseminate practical insights on CMMI application, this individual has authored and freely distributed an e-book, drawing from authentic implementation experiences, for the benefit of software engineers seeking to apply these principles in practical scenarios.

The founder of Modern Systems for Software Development holds a strong belief in the development of human resources, particularly in nurturing young talent. This commitment extends to providing expertise in software business process development and analysis, which contributes to the national economy in the IT sector. Their dedication led to the collaboration with a U.S. consultant in authoring a comprehensive book on CMMI, which they generously offer free of charge to the global community.

Custom software development, including portal creation, is tailored to meet the specific needs and objectives of clients, as guided by their recommendations and directives. Modern Systems for Software Development specializes in crafting bespoke software solutions that cater to the unique requirements of customers, ensuring accessibility through online platforms or internal networks.

Modern Systems for Software Development is committed to embracing diversity in IT specialization, ensuring that customer demands are met with professional services and products that adhere to international standards, all offered at competitive prices.

1.2 Why Modern Systems

Organization leaders strive to offer outstanding products and services that meet the needs and expectations of a global clientele. IT departments bear a crucial role in providing high-quality e-services that align with the organization's financial agreements and management expectations. It is essential to seek cost-effective solutions that support the organization's objectives and ensure sustainable operations.

Modern Systems for Software Development, based in Egypt, is dedicated to meeting the diverse software requirements of all users. With a strategic approach, Modern Systems for Software

Development offers vital support to various private and public entities, delivering high-quality, cost-effective in-house software solutions. Additionally, the company specializes in tailoring renowned global software to align with the unique needs and objectives of its clients.

Modern Systems for Software Development boast extensive expertise in business processes and the implementation of software solutions. They strategically utilize a selection of technologies in synergy to fulfill the specific needs of organizations. This approach ensures that each technology is leveraged effectively to enhance the organization's operational efficiency and achieve its strategic objectives.

Modern Systems for Software Development are committed to fostering human welfare, particularly for the youth, to accomplish strategic objectives aimed at ensuring a high quality of life for all. This commitment is mirrored in the services offered to both local and global markets, reflecting a dedication to excellence and a better future through technological advancement.

Modern Systems for Software Development specializes in delivering bespoke software solutions, including proprietary platforms such as VisitClinic.org. We cater to the unique requirements and expectations of our clients, whether it involves developing custom software from scratch or tailoring existing products like Microsoft SharePoint to meet specific business needs. Our commitment is to ensure that our software aligns perfectly with the client's vision and operational demands.

Modern Systems for Software Development are equipped to deliver solutions that adhere to a variety of global standards, including the Information Technology Infrastructure Library (ITIL), Customer Relationship Management (CRM), and the Capability Maturity Model Integration (CMMI). These systems are designed with the flexibility to be customized and configured to meet the specific needs of different international standards.

Modern Systems for Software Development is committed to delivering comprehensive support through our team of expert consultants. We specialize in analyzing and developing software solutions that are tailored to meet our customers' expectations and align with their strategic organizational goals. Our approach ensures that the software we configure is not only functional but also a strategic asset to our clients' operations.

1.3 Modern Systems Services

Modern Systems for Software Development, a dedicated entity within the IT sector, is committed to refining business processes and bolstering visibility for both internal staff and external clientele, aligning with the company's strategic goals. Our proficiency lies in ongoing process enhancement, a key aspect of our services designed to foster organizational growth.

Modern Systems for Software Development are designed to enhance service delivery, both online and offline, by tackling the challenges faced by internal and external customers. These systems strive to foster innovation, providing tailored solutions that assist all stakeholders in reaching their objectives efficiently. By leveraging modern methodologies and technologies, they offer a robust framework for businesses to improve customer satisfaction and operational excellence.

Modern Systems for Software Development boasts a wealth of experience across various software domains. Recognized globally, the following frameworks are among the most widely adopted by organizations, and Modern Systems for Software Development is well-equipped to assist any organization by offering comprehensive software solutions and thorough process analysis. Their expertise ensures that clients receive tailored, cutting-edge software strategies that align with industry best practices.

1.4 Visit Clinic 1# Medical Society

Visit Clinic offers an integrated platform designed for healthcare professionals, including doctors, pharmacists, and laboratory technicians, medical factories, computer stores, medical factories, schools, educational institutions; faculties; and universities, as well as sales representatives and individual clients. This comprehensive system facilitates seamless collaboration across various medical services, ensuring a more cohesive healthcare experience. By uniting diverse roles within a single interface, Visit Clinic streamlines the delivery of medical care and support.

Visit Clinic offers a user-friendly platform with a vast array of features suitable for various needs. It is equipped with numerous functionalities that cater to diverse preferences, ensuring that you can easily find what you're searching for. The dedicated team of consultants continuously updates the website, striving to meet and exceed user expectations with every enhancement.

1.5 Visit Clinic dashboard

Explore visit clinic's portal to discover the outstanding services we offer. The accompanying graph illustrates the success story of our portal, showcasing the effectiveness and reach of our services through compelling numerical data. This visual representation serves as a testament to our commitment to excellence and the measurable impact we have on our community's health outcomes.

1.6 Visit Clinic Youtube Video

Modern Systems for Software Development's Visit Clinic would like to draw your attention to our video content. Please be aware that due to ongoing updates to our portal, this content may no longer be current. We encourage you to log in to the system or download the most recent documentation directly from the portal to ensure you have access to the latest information. Thank you for staying updated with us.

1.7 Microsoft Copilot

Microsoft Copilot is an AI-powered assistant designed to enhance your productivity and simplify various tasks. Integrated within Microsoft 365 applications like Word, Excel, Outlook, and PowerPoint, Copilot helps users by:

- **Generating Content:** It can create text, generate summaries, and offer suggestions to improve writing.
- **Answering Questions:** It provides accurate and relevant information, helping you find answers quickly.
- **Performing Tasks:** It can automate repetitive tasks, freeing up your time for more important activities.
- **Providing Insights:** It analyzes data and provides insights, making it easier to understand and utilize information effectively.
- **Creative Projects:** It assists in brainstorming ideas and generating creative content.

With Copilot, you have a powerful tool at your disposal to enhance productivity and streamline your workflow.

Microsoft Copilot offers several plans to cater to different needs:

1. **Standard Copilot:** This is the free version that provides access to basic AI features, such as generating and editing AI images, and using GPT-4 during non-peak hours. It's available on the web, Windows, macOS, iPadOS, and mobile apps¹.
2. **Copilot Pro:** For \$20 per month, this plan offers priority access to GPT-4 and GPT-4 Turbo during peak usage times, 100 boosts per day for creating AI images, and access to Copilot in the free web versions of Word, Excel, OneNote, and Outlook.
3. **Copilot for Microsoft 365:** Priced at \$30 per month, this plan integrates seamlessly with Microsoft 365 apps (Teams, Word, Outlook, PowerPoint, Excel, etc.) and includes enterprise-grade security, privacy, and compliance.

4. **Copilot Studio:** This is a low-code, end-to-end conversational AI platform that allows you to build and customize your own Copilots.

Each plan offers different features and benefits, so you can choose the one that best fits your needs. Would you like more details on any specific plan?

How to register and activate your Hotmail account for Microsoft Copilot for free, follow these steps:

1. **Create a Microsoft Account:** If you don't already have a Microsoft account, sign up using your Hotmail email address. Visit the Microsoft account creation page and follow the instructions to create your account¹.
2. **Access Free Microsoft 365 Apps:** Once your account is created, you can access the free online versions of Microsoft 365 apps like Word, Excel, Outlook, and PowerPoint. These apps are available for free with a Microsoft account¹.
3. **Enable Copilot:** To enable Copilot in the free version, you may need to check for updates in the Microsoft 365 apps and ensure that Copilot features are turned on. You can usually find this in the settings or options menu of each app.
4. **Check for Updates:** Make sure your Microsoft 365 apps are up to date, as Copilot features may be included in recent updates.
5. **Use Copilot:** Once enabled, you can start using Copilot to assist you with various tasks in the Microsoft 365 apps.

Microsoft Official Copilot Website <https://copilot.microsoft.com/>

1.8 Portal Response Challenge

The Visit Clinic portal offers user-friendly functionalities and straightforward development strategies to address potential issues arising from ambiguous software development challenges, ensuring a consistently fast response. However, low portal response times could be attributed to one of the following reasons:

- 1- Check your internet connection speed using well-known portals such as Speedtest <https://www.speedtest.net/>
- 2- Ensure your internet bundle is active. If necessary, restart the internet router or contact your internet provider for technical support.
- 3- Open the portal and allow it to fully load. This helps your browser download cache files, ensuring it is ready and faster for future visits.
- 4- You can download widely-used internet browsers:
 - a. Microsoft Edge <https://www.microsoft.com/en-us/edge/?form=MA13FJ>
 - b. Google Chrome <https://www.google.com/chrome/>
- 5- If you encounter any new issues, please don't hesitate to contact us by email, including a screenshot for reference.

1.9 Portal Migration

The Visit Clinic portal has been migrated from www.visitclinic.org to the current portal www.visitclinic.net, following the strategic directions and recommendations of Modern Systems for Software Development. The portal's Facebook and LinkedIn pages remain unchanged.

If you need any assistance or guidance, please feel free to contact the company through the approved communication channels listed at the end of this document

2. Factory Products

A factory constitutes a complex or a collection of structures dedicated to the production of goods. The scale of factories varies widely, from modest workshops to massive facilities that occupy entire urban areas. Within these industrial settings, workers and machines transform raw materials and components into finished goods ready for distribution. Specifically, a medical factory specializes in the creation of healthcare-related products, including pharmaceuticals, medical instruments, dietary supplements, among others. These establishments operate under stringent quality control protocols known as Good Manufacturing Practices (GMP), which guarantee the safe and efficient production of items. Furthermore, the term 'medical plant' may also denote scientific research facilities where various experiments, analyses, and evaluations are conducted.

2.1.1 Add a new product

Medicinal products encompass a broad range of devices, materials, or software utilized in the healthcare sector for various purposes, including diagnosis, prevention, monitoring, treatment, or alleviation of diseases or injuries. The Visit Clinic website offers a unique platform that allows for the inclusion of a product into its database, thereby facilitating the introduction of the product to both users and researchers. This is achieved through the website's distinctive features designed to showcase medicinal products effectively. Whether it's a pharmaceutical manufacturing device or a product from medical regulatory bodies, such as a medicine cabinet, the website caters to a diverse array of medical products. The services provided by the site include:

2.1.2 Factory Product Catalogue

The factory product catalog management system presents a readily accessible list of all available products that have been added to your account. This organized inventory overview allows for quick and efficient identification of the specific items you need to work with.

This intuitive form is specifically designed to streamline the product selection process. By providing a clear and comprehensive list, it enables you to easily choose the correct product and immediately begin managing its associated information, saving time and reducing potential errors.

2.1.3 Product Main Section Configuration

The Visit Clinic portal offers a Product Main Section Configuration feature, which serves as a centralized hub for all products related to the company. This feature includes links that are conveniently located within the product catalogue list and the product homepage form. The classification system is designed to provide a high-level categorization that displays both the name and the active status of each product. This streamlined approach ensures that users can easily navigate and manage the company's product offerings with efficiency and clarity.

2.1.5 General Information

Information on medicinal products encompasses a variety of data related to the product, which may include:

- The marketed name of the product.
- The active ingredient responsible for the product's therapeutic effect.
- The pharmaceutical form the product assumes, such as tablets, capsules, injections, and so forth.
- The quantity of the product contained in each package.
- The retail price that consumers pay to acquire the product.
- The indications, which are the ailments or conditions the product is intended to treat.
- The potential adverse reactions that may manifest during the use of the product.

Visit Clinic offers the functionality to input general information about the products produced by pharmaceutical manufacturers.

2.1.6 Product Policy

The Visit Clinic Portal is a dedicated platform designed to facilitate the integration of comprehensive product policies, thereby assisting the company in seamlessly incorporating relevant product policy statements. This portal features a policy section equipped with a text editor that mirrors the functionality and layout of Microsoft Word, ensuring that the text is well-organized and formatted to professional standards. This intuitive interface aims to streamline the process of policy management, making it more efficient for companies to maintain and update their product guidelines.

2.1.7 Product Promotion/discounts

Product promotion encompasses a suite of strategic marketing activities designed to pique the interest of prospective consumers and ignite awareness about a brand, product, or service. This multifaceted approach leverages a blend of advertising, public relations, social media engagement, exhibitions, promotional giveaways, and sponsorship deals to effectively communicate the unique selling points, advantages, and availability of the offering. The overarching goal of these promotional endeavors is to bolster sales figures and cultivate a robust sense of brand allegiance, positioning it as a pivotal component within the broader marketing mix framework.

Furthermore, the Visit Clinic platform offers a dynamic feature that allows for the periodic integration of promotional details provided by manufacturers concerning their products. This functionality ensures that customers are kept abreast of the latest offers, reinforcing the continuous cycle of product promotion and customer engagement.

2.1.8 Product colors

The palette of product colors embodies the distinct tones and nuances a brand selects to visually communicate its identity across various platforms, encompassing everything from its logo and website to its packaging. The choice of colors for products is influenced by the medium in use. For instance, digital screens such as monitors, displays, or televisions utilize a combination of red, green, and blue (RGB) to create the spectrum of colors we see. Conversely, in the realm of print media, whether it be printed materials, paints, or dyes, the primary colors of cyan, magenta, and yellow (CMY) serve as the foundational elements for color creation.

Selecting an appropriate color for a product, its packaging, or advertising materials necessitates a thoughtful consideration of the customer's preferences and the psychological impact of colors. The hues chosen can impart significant insights into a brand's ethos. Each color can trigger distinct emotional responses and associations; for example, green often represents growth, wellness, and the natural world, whereas red is frequently associated with fervor, excitement, and a sense of urgency.

Moreover, platforms like the Visit Clinic website enhance the user experience by offering the option to customize product colors. This feature is particularly beneficial in scenarios such as a pharmaceutical manufacturing device that incorporates color. Consequently, when the product is showcased on the website, detailed information regarding the available color options for the device is readily accessible to users.

2.1.9 Product shipping

Product shipping encompasses the entire process of sending goods from the point of origin, typically a retailer's or supplier's warehouse, to the final destination, usually the customer's address. This process is integral to the supply chain and involves several stages, including the packaging of products post-manufacture, the handling and dispatching of these packaged goods, and the actual transportation of these items. A dedicated shipping or logistics company often oversees this multifaceted operation.

Furthermore, the Visit Clinic website has introduced a feature that enhances the shipping process by allowing the inclusion of the factory's shipping address, streamlining the supply chain management for businesses. This addition is indicative of the ongoing evolution of shipping logistics, aiming to optimize the flow of goods in an increasingly interconnected market

2.1.10 Sales Locations

The term 'sales location' denotes the specific point at which customers acquire goods or services. This is the venue where the actual exchange of goods for payment is finalized. Such locations can range from tangible brick-and-mortar establishments to virtual online platforms, or any other setting conducive to commercial transactions.

Taking over-the-counter transactions as an instance, the sales location is identified as the physical retail space where the customer physically obtains the purchased item. Conversely, in digital commerce scenarios, the sales location is often equated with the address where the customer's order is delivered.

The Visit Clinic platform enhances this concept by allowing the addition of multiple sales locations. This feature simplifies the process for potential buyers to locate and understand the company's publicly shared information. Moreover, the platform extends its functionality by enabling the inclusion of the factory's shipping address, further streamlining the distribution process.

English	https://www.youtube.com/watch?v=ori88_UXAjQ

2.1.11 Files and Links

In the realm of online commerce, product files and links serve as integral digital resources tied to a specific item. Product files encompass a range of digital materials that enhance the buyer's understanding of the product, such as user guides, detailed technical data, guarantees, and setup guides, typically accessible in formats like PDF or DOC for ease of download. Product links, on the other hand, are direct connections to supplementary content, potentially directing to the producer's site, visual product demonstrations, consumer critiques, or merchandise with a connection to the item in question.

These digital assets are commonly located on the product's individual page, aiming to equip potential buyers with the necessary knowledge to make well-informed purchasing choices. They offer insights beyond what is presented in the brief product overview or listed specifications.

The Visit Clinic platform capitalizes on this by allowing the upload of various file types, including images and text documents, to its site. Moreover, it facilitates the addition of video content by enabling the embedding of YouTube video links, thus allowing seekers of information to directly engage with visual media on the platform.

2.1.12 Factory Locations

Selecting the optimal location for a manufacturing facility, often referred to as facility or plant location, involves determining the most suitable region and specific site for establishing a production unit. An ideal location ensures ample access to customers, workforce, and transportation networks. The strategic positioning of a business is a critical determinant of its success or failure. This decision is not only pivotal for current operational needs but also for accommodating future growth aspirations. Inadequately chosen locations can lead to costly and complex relocation efforts.

The Visit Clinic platform offers a feature that allows the addition of factory branches, simplifying the process for potential clients to locate and understand the company's publicly shared information. Furthermore, the platform supports file uploads, such as images or documents, and the integration of YouTube video links, providing a comprehensive view of the facility through multimedia resources.

2.1.13 Related Products

Related products encompass a range of items that are connected through various associations to a primary product. These connections may be due to a change in the price of one product affecting another, or they may be items suggested alongside a product currently being viewed by a customer. Their purpose is multifaceted: they can enhance the use of the main product, complement it, amplify the user's satisfaction, or provide solutions to any limitations the main product may have. They often serve as supplementary parts or variations of the main product, offering different features such as color, size, or model. Typically, related products fall within the same category or closely related subcategories as the item being considered by the customer.

Visit Clinic offer the capability to showcase a variety of products, whether they are produced by the same manufacturer or sourced from different factories. This feature allows for a broader selection of related products, thereby increasing the chances of meeting diverse customer needs and preferences.

2.1.14 Related Medical Product

Medical products encompass a broad range of items that can be organized into distinct categories. Firstly, health-related products refer to any non-prescription commodities that are purported by their manufacturers or distributors to have health benefits. Secondly, the term 'medical products' is more comprehensive, including all regulated entities such as substances, chemicals, compounds, medications, blood, tissues, organs, serums, living organisms or their components (inclusive of genetic material), viruses, and associated waste. These are utilized in various medical contexts, including treatment, laboratory testing, drug production or analysis, and other forms of biomedical investigation. Additionally, Visit Clinic offers an opportunity to feature related medical products on its platform, even those produced by external manufacturers. This inclusion facilitates a broader access to essential medical supplies, thereby enhancing the scope of healthcare services provided.

2.1.15 Product Images

Product visuals serve as a crucial bridge between consumers and merchandise, highlighting the attributes, aesthetics, and practicality of items. Utilized across digital retail platforms and virtual marketplaces, these images facilitate discerning purchase choices. Moreover, they embody the conceptual and emblematic essence of a product, reflecting its established identity.

Within the realm of product imagery, any depiction of merchandise on offer falls under this category. This branch of photography, often termed commercial photography, aims to captivate and persuade consumers through visual allure. By presenting intricate details and characteristics, these visuals complement textual descriptions and narratives, offering a comprehensive portrayal to prospective buyers.

The Visit Clinic website enhances this visual interaction by enabling the incorporation of product images. This feature empowers users to visually explore and connect with the products, enriching their search and selection process.

2.1.16 Contact us

The 'Contact Us' section is a dedicated space provided on the company's website or within product documentation that guides customers to essential communication resources. This section typically includes vital contact details such as telephone numbers, email addresses, and physical office locations, offering multiple channels for inquiries, support issues, or feedback regarding the company's offerings. Additionally, it may feature an integrated contact form, enabling customers to submit their messages directly. This serves as a bridge between the customer and the company, facilitating a dialogue that not only assists the customer but also allows the company to enhance its services and products through valuable customer insights.

2.1.17 Product FAQ

Frequently Asked Questions (FAQs) serve as a curated collection of inquiries and responses tailored to address common concerns within a specific area or about a particular subject. These compilations are typically organized to offer foundational knowledge to individuals who are new to a community or service, or to impart comprehensive insights on specialized topics. Often integrated into product documentation, FAQs are a staple across diverse sectors, including digital forums and commercial enterprises, due to their utility in conveying information succinctly and facilitating research. Visit Clinic enhances user experience by incorporating a feature that allows the addition of pertinent questions and answers to its offerings, streamlining the process for researchers to access and comprehend the necessary information with ease and clarity.

2.1.18 Product News

Product news encompasses recent developments and updates related to a product, encompassing new feature announcements, enhancements to current offerings, adjustments in pricing, or the introduction of novel products. Typically disseminated via press releases, blog entries, social media communications, and newsletters, product news serves as a conduit for businesses to maintain customer awareness and stimulate enthusiasm for upcoming innovations. Visit Clinic offers a feature that enables the integration of product-related news, including customer transactions or other pertinent product-centric discussions.

2.1.19 Product customer list

A Customer List is a curated record of a company's active or past clientele, assembled according to specific criteria. This compilation typically encompasses details like customer names, contact particulars, demographic insights, purchase history, and additional relevant data. The parameters for constructing such a list are tailored to the firm's objectives, which may include identifying customers who engaged in transactions within a certain timeframe or segmenting them based on demographic characteristics. Visit Clinic enable the integration of customer information into healthcare product databases, streamlining the process for medical establishments.

2.1.20 Product success stories

A product's success narrative encapsulates its entire lifecycle, from conception to market triumph. It's a tale of evolution, detailing the stages of ideation, strategizing, crafting, developing, manufacturing, promoting, and ultimately, transacting. These narratives serve as testaments to how enterprises can flourish by delivering solutions that resonate with consumer desires and surpass their anticipations. They often chronicle the hurdles encountered during the product's inception and the strategies employed to surmount them. At times, they also celebrate the transformation of a nascent concept into a ubiquitous commodity, providing motivation for aspiring innovators. Visit Clinic offers a feature that allows the documentation of such a success story, highlighting the product's journey to a client's acquisition. This interface showcases the narrative details and incorporates the contributions of the client's team members, spotlighting their pivotal roles in the venture.

2.1.21 Product Intermediate Medicine

In the process of creating an active pharmaceutical ingredient (API), a drug product intermediate emerges as a crucial material. This intermediate is not the final API but is formed when a drug substance is processed alongside other substances. It represents a transitional stage in the drug's development and must be subjected to additional molecular transformations or processing steps to evolve into either the API or the final medicinal product. Serving as a foundational component, the intermediate is integral to the manufacturing of the final drug product. The Visit Clinic website facilitates the inclusion of such intermediate medicines, which play a pivotal role in the production of medical products.

2.1.22 Statistical data

Statistical data encompasses gathered, scrutinized, structured, and presented information. As a pivotal branch of mathematics, statistics boasts extensive applications and is dedicated to the aggregation, condensation, illustration, and inferential analysis of data sets. Its utility spans a broad spectrum of scientific disciplines, from physics to the social sciences and humanities, influencing sectors such as politics and commerce.

The Visit Clinic website facilitates the integration of statistical data into product profiles. This statistical content bifurcates into two segments: the initial segment presents the data visually, while the subsequent segment incorporates temporal and quantitative sales data of pharmaceutical products. Upon accessing a medicinal product's profile, users are greeted with both general and statistical data, providing a comprehensive overview.

2.1.23 Statistical Infromation

The Visit Clinic portal offers a comprehensive suite of product statistical information, which is pivotal for enhancing sales activities. This data not only furnishes the approved text for display but also enriches the understanding of the product's performance. Such detailed information is crucial as it contributes significantly to the depth of insight and value provided about the product. By leveraging this data, stakeholders can make informed decisions, tailor their sales strategies, and ultimately drive the product's success in the market.

2.1.24 Product Categories

Product categorization serves as a systematic method for companies to sort and manage their offerings. This organizational tool simplifies the search process for consumers on a digital platform, while also streamlining product referencing for staff members. Typically, categories are structured hierarchically to accommodate the commonalities shared by various items.

Categorization can be executed through multiple lenses, such as the nature of the product, its characteristics, or the needs it fulfills for the consumer. It's common for enterprises to feature an array of these classifications on their websites, enabling customers to conduct broad or specific searches based on product type, features, or application.

Strategically, product categories enhance marketing initiatives. Grouping akin products facilitates the promotion of related items, potentially boosting the sales of several products simultaneously. Accessibility is key; when products are readily discoverable, they attract the appropriate consumer base. Conversely, if customers struggle to locate desired items, they may take their business elsewhere. However, well-defined, succinct, and orderly product categories increase the likelihood of customers finding their desired items, which in turn, elevates conversion rates.

For instance, the Visit Clinic website incorporates a feature that allows for the addition of classifications to each product. These classifications are bifurcated into two principal types: the primary division, which addresses the overarching classification, and the secondary division, which delves into more specific sub-categories. Details regarding both levels of classification can be inputted on a distinct screen, providing users with a clear view of a medicinal product's categorization.

The advantage of such a classification system is twofold: it not only delineates the product within its technical segment but also provides detailed insights into its specific niche within that segment. For example, the primary classification might illustrate the broader technical category of the product, while the secondary classification offers a more focused explanation of the product's role within that category. Additionally, a descriptive classification can further shape the consumer's understanding of the product's features and applications. This multi-tiered

approach to classification not only aids in navigation but also enhances the user's experience by presenting a coherent and informative product landscape.

2.1.25 Product comparisons and ratings

Product feature comparison is an evaluative process where the attributes and designs of various products are juxtaposed. This practice spans numerous industries and is a key activity for both consumers and companies. It serves as a foundational element of competitor analysis, albeit in a more focused form. This comparison delineates the characteristics of each product, highlighting their advantages and pertinence to particular customers. It not only contrasts two products but also identifies the superior one, substantiating this claim with tangible evidence and features displayed in a visual format, such as a chart or table.

Moreover, the Visit Clinic website enhances this analytical capability by allowing the integration of product classifications. This system accommodates a hierarchical structure comprising a primary classification, secondary sub-classifications, and specific classification titles. Each classification title can encapsulate up to ten pieces of information, all of which are visible within the product classification data, thereby enriching the comparative analysis process.

2.1.26 Product Poll

The product catalog from the factory offers a polling feature, which is a method of gathering opinions or votes from individuals on a specific subject or matter. This process enables the collection of valuable feedback and insights, which can inform decision-making and strategy development. By engaging with a diverse audience, the poll can capture a wide range of perspectives, contributing to a more comprehensive understanding of the topic at hand.

Whether for market research, public opinion, or internal company decisions, this tool is essential for gauging sentiment and making informed choices.

2.1.27 Product User Guide

A user guide serves as an informative resource that assists individuals in comprehending and utilizing a product, service, or system effectively. Typically, it encompasses a combination of textual directions and illustrative imagery that delineates the product's attributes, capabilities, and operational procedures. This document is designed to facilitate a smoother user experience by providing clear and concise information that guides the user through each aspect of the product, service, or system.

2.1.28 Product Services

The product catalog of a factory outlines the range of services offered, which are designed to augment the inherent value and utility of its products. These services encompass a variety of activities that a company undertakes to ensure that their products not only meet the expected standards but also provide additional benefits to the consumer. By enhancing the product's value, the company aims to differentiate itself in the market and offer more to its customers than just the physical product. This holistic approach to product enhancement is a strategic move to build brand loyalty and increase customer satisfaction.

2.1.32 Product Certificate

The "Visit Clinic Portal Product Certificate" is a document that will be issued to a factory by an external organization. This certificate serves as a testament that the factory's product adheres to both national and international standards. It is a crucial step in ensuring that the product meets the required quality and safety benchmarks before it is released into the market. By obtaining this certificate, the factory can demonstrate its commitment to excellence and its compliance with regulatory guidelines. This not only helps in maintaining consumer trust but also enhances the product's credibility in the global marketplace.

2.2 Additional Subscription

2.2.1 IT Service Management

ITIL, or the Information Technology Infrastructure Library, is a comprehensive set of practices for IT service management (ITSM) that aims to align IT services with the needs of businesses. It provides a detailed framework for managing and delivering IT services, including processes, procedures, tasks, and checklists that are not specific to any one organization or technology. Originating from a UK government initiative in the 1980s, ITIL has evolved through several versions, with ITIL 4 being the most recent, reflecting a shift towards a more holistic approach to service management that integrates methodologies like Agile, DevOps, and Lean.

The Visit Clinic portal is equipped with four core ITIL processes, designed to cater to organizations of any scale. These processes encompass Incident Management, Knowledge Management, Service Catalog Management, and Service Request Fulfillment. By integrating these processes, the portal ensures a comprehensive management system that can streamline and enhance organizational operations. Additionally, to access these four processes, an extra monthly subscription is required, which is a small investment for the significant value and efficiency they bring to an organization's service management capabilities.

Service Catalog Management	Service Catalog Management is a critical component of IT Service Management (ITSM) that involves creating and maintaining a comprehensive list of services that an organization provides to its customers. It serves as a single source of consistent information on all operational services and those being prepared to run operationally. The catalog aids in managing service requests efficiently by guiding customers to the appropriate service, thereby streamlining the process and improving the overall service delivery.
Knowledge Management	Knowledge Management (KM) is a systematic process that involves identifying, organizing, storing, and sharing information within an organization. It encompasses a multidisciplinary approach to achieve organizational objectives by making the best use of knowledge. This includes managing different types of knowledge, such as tacit, implicit, and explicit, and utilizing various tools and processes to facilitate knowledge creation, dissemination, and application.

	Effective KM strategies can lead to improved performance, innovation, and competitive advantage by fostering an environment of continuous learning and knowledge sharing.
Incident Management	ITIL Incident Management is a critical component of the ITIL framework, which stands for Information Technology Infrastructure Library. It is a structured process used by organizations to manage and resolve incidents that significantly disrupt or degrade the normal functioning of IT services. The primary goal of this process is to restore normal service operation as swiftly as possible, minimizing the impact on business operations and maintaining high levels of service quality and availability.
Service Request Fulfillment Management	ITIL Service Request Fulfillment Management is a critical component of the ITIL framework, focusing on the efficient and effective handling of service requests. This process ensures that requests from users for information or access to services are managed from initiation through to successful completion. It distinguishes between service requests and incidents, providing a structured approach to managing routine IT service actions such as password resets or access permissions. The goal is to deliver a high level of service support quality, enhancing user satisfaction and optimizing resource allocation within an organization.

The provided scope is

New Incident 	The visit clinic's portal offers a feature that allows users to register a new incident within the factory product catalog. This functionality is designed to streamline the process of reporting new incidents to the IT service management team. Typically, such incidents may stem from disruptions in the company's local network services. By utilizing this tool, the company can efficiently manage and resolve issues, ensuring minimal impact on operations and service delivery.
Incident List 	The visit clinic's portal offers a feature that allows users to access the Incident List, which is regularly updated with the latest information regarding any incidents. This ensures that users are kept informed about the most recent developments in real-time.
New Service Request 	The Visit Clinic portal offers a streamlined interface for users to search for and submit new requests through the IT Service Management portal to the Service Request Fulfillment Management system. This service, which was previously designed and prepared by the management team, is now set up and ready for user submissions.

2.2.2 Project Management

Project management is the discipline of applying knowledge, skills, tools, and techniques to guide a project from inception to completion. It involves planning, organizing, and overseeing tasks to achieve specific goals within a set timeframe and budget. Key components include defining the project scope, identifying deliverables, managing risks, and ensuring effective communication across teams. This field is essential for turning ideas into reality, whether it's launching a new product, constructing a building, or developing software.

The Visit Clinic Portal is equipped with a comprehensive project management module designed to assist medical organizations in the efficient handling of projects and operational tasks. This module encompasses a range of features including stakeholder management, activity tracking, risk assessment, time and code monitoring, as well as integrated dashboards and Gantt charts for streamlined project visualization and planning. By leveraging these tools, healthcare administrators can ensure that projects are completed on time, within budget, and with all necessary considerations accounted for.

My Projects List 	The 'My Projects List' feature within the clinic portal's project management module is designed to assist medical organizations by offering a comprehensive view of previously established projects. This enables efficient project oversight and management by allowing healthcare administrators to review and interact with the existing projects in their portfolio. By streamlining the process of project tracking, the module aids in ensuring that each project aligns with the organization's objectives and progresses smoothly towards completion.
New Project 	The visit clinic portal's project management module is designed to streamline the creation of new projects for medical organizations. By utilizing this feature, healthcare administrators can initiate new projects with ease, allowing for the prompt addition of stakeholders and the coordination of related activities. This efficient tool simplifies the process of project initiation, ensuring that all necessary parties are involved from the outset and that the project's framework is established effectively.

Dashboard

The clinic's portal features a comprehensive dashboard within the project management module, offering a complete overview of the project's progress and status. This centralized dashboard is designed to streamline project tracking and management, providing users with immediate access to all critical project metrics and milestones. It serves as a one-stop solution for monitoring the various aspects of the project, ensuring that all team members are aligned and informed about the latest developments. The intuitive interface of the dashboard allows for easy navigation and quick understanding of the project's scope, timeline, and resource allocation, facilitating efficient project oversight and decision-making.

2.2.3 Human Resources Management

Human Resources Management (HRM) is a strategic approach to the effective and efficient management of people within an organization. It aims to maximize employee performance in alignment with the employer's strategic objectives. HRM encompasses a range of functions, including recruiting, hiring, training, compensating, retaining, and motivating employees. It also involves developing and enforcing policies to ensure employee safety and managing compliance with employment laws. Essentially, HRM

The Visit Clinic Portal offers a comprehensive Human Resources Management solution designed to assist organizations in streamlining their operations. From managing minor tasks to overseeing contracts and attendance activities, this system serves as an integral tool for enhancing organizational efficiency. It simplifies the complexities of human resources tasks, allowing for a more organized approach to managing the workforce and its various administrative duties. By integrating this solution, organizations can ensure a smoother workflow and improved management across all levels.

Income 	The income form is a specialized document crafted to generate revenue for the company, utilizing a range of proposed criteria. It features various classifications to facilitate meticulous tracking of the data captured by the form. Additionally, this form is engineered to seamlessly integrate with case management and asset management systems, enhancing operational efficiency and data coherence.
Expenses 	The Expense Form is a specialized tool crafted to manage and allocate company expenditures according to a range of proposed criteria. It features a comprehensive classification system that ensures meticulous tracking of financial data. Additionally, this form is integrated with case management and asset management systems, streamlining processes and enhancing operational efficiency.

New Assets 	The Visit Clinic portal offers a feature that allows the addition of new assets to the organization's directory, including items like televisions, computers, or various other types of equipment. This functionality enables the seamless transfer of assets from one employee to another, ensuring efficient resource management within the organization.
Search Assets 	The Visit Clinic Portal offers a valuable feature that allows users to access the Asset Directory. This enables them to browse through the assets added by the company. Users can modify the submitted information or reassign assets to new employees, ensuring that asset management is streamlined and efficient.
New Customer Case 	The Visit Clinic portal offers a streamlined feature for incorporating new cases into the organization's directory, a process that is driven by customer recommendations or complaints. This user-friendly interface ensures that feedback is not only heard but acted upon, enhancing the organization's responsiveness and service quality. By integrating customer insights directly into the case management system, the portal facilitates a dynamic and client-oriented approach to healthcare administration.
Case List 	The Visit Clinic portal offers a robust feature that allows users to navigate the case Directory. This enables them to review and manage company-submitted cases efficiently. Users can easily update the information provided or delegate the case to a new employee, ensuring a seamless and adaptable workflow.
Cases Inbox 	The clinic's visit portal offers a robust feature for managing case inboxes, allowing users to navigate through the directory of escalated company cases. This functionality facilitates prompt responses to submitted recommendations or complaints, ensuring efficient communication and resolution of issues.
Company HR Request Forms 	The Visit Clinic portal offers a streamlined interface for users to search for and submit new HR requests through the Human Resources Management portal to the HR Request Management system. This service, which was previously designed and prepared by the management team, is now set up and ready for user submissions.
