1. Modern Systems for Software Development

1.1 Introduction

Modern Systems is a specialized software establishment and the main purpose is to provide software development, software analysis software implementations based on international standards.

Modern Systems for software development developed a medical software to provide online services for doctors, pharmacy and medical sales agents, public users are a main part of the systems since they will use the system as ordinary user and doctors and pharmacy will use the system to search for them and provide the right medicine or service.

The system will offer wide range of functionalities like internal medicine or other medical specializations. The system also will provide a list of medicine available for everyone, the list consists over 189 thousand medicine common names organized by country.

Visit Clinic will offer general modules like account module with general ledger to add income or expenses for each clinic or pharmacy. There are other modules inside the system please register for more information.

Modern Systems offer software analysis services based on high standards for private and public organizations such as information technology infrastructure library or ITIL and its specialized for IT services and it known worldwide by many organizations. ITIL provide around twenty-six business process and professional certifications for beginner's level, intermediate level and expert level.

Modern Systems can offer business analysis for the process and help organizations to implement processes based on international systems and at the same time can also provide software development for given process such as incident management, and knowledge management.

Modern System founder achieved success story before with Microsoft, Horvath and Link dot net in a governmental organization.

CMMI or capability maturity model integrations is an international standard the main goal is to provide business process to help the organization to do their business in an organized style. There are around twenty-two business process. The company owner participated in a big CMMI transformation project in governmental organizations. The company owner published a free e-book as a reference for the CMMI based on real implementations, the book published for free to all software engineer to get more real knowledge to implement CMMI in real life.

Modern Systems founder believe I human resources development to help you people specially to provide software business process development and analysis to help the national economic in

the IT field, and this helped him to write a complete book with USA consultant to write the CMMI book and provide this book for free to the humanity.

Portals development or custom software is a special development for customer based on recommendations and direction, Modern Systems can provide custom softwares based on customer needs and the softwares can have accessed online or though the internal network.

Modern Systems believe in IT specialization diversity and will offer to satisfy customer needs by providing professional services or products based on international standards and with competitive prices.

1.2 Why Modern Systems

Organization executives would like provide exceptional products and services to attract people from the globe and to set everyone needs and expectations, IT teams have curial responsibility to deliver good eservices quality to the organization and with agreed costs with the management and it better to find affordable solutions for the organizations.

Modern Systems is an Egyptian establishment formed to fulfill the software needs for everyone. Modern Systems developed strategic plans to provide the essential support to many private and public organizations with developed in house software with high quality and affordable prices or customize famous softwares worldwide based on customer expectations and directions.

Modern Systems have good experience in business process and software implementations and employ selected technologies with each-others to meet the organization needs.

Modern Systems believe in human well epically for young people to achieve the developed strategic goals such as good life for everyone and this will reflect the provided services to the local and international markets.

Modern Systems will provide in house software like www.VisitClinic.org or develop softwares based on customer needs and expectations, or customize ready-made software to the customer based on his expectations like Microsoft SharePoint or any other provided softwares.

Modern Systems can provide software development to many international standards such as ITIL (information Technology Infrastructure Library), CRM (Customer Relationship Management),

CMMI (Capability Maturity Model International), or another international standard with customization and configurations.

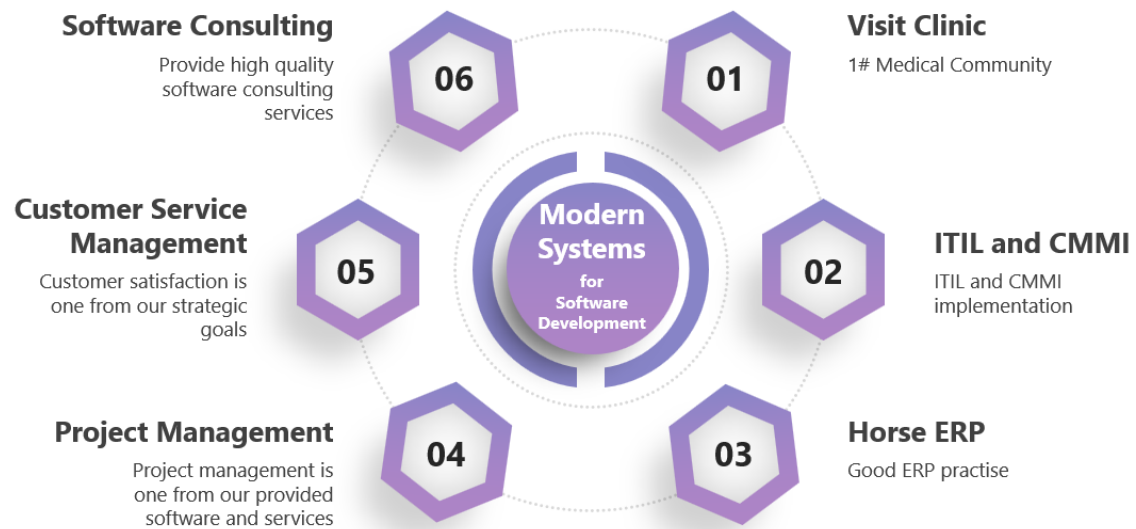

The Modern Systems will provide all types of support to the customer by qualified consultants to analyze and develop software / configure softwares to the customer based on his expectations and match the developed organization strategic plans.

1.3 Modern Systems Services

Modern Systems as a specialized establishment in IT industry will offer optimized business process and enhance the organization visibility for internal employees and external customers based on the organization strategies. Continuous process improvements is one from our expertise to help the organizations to grow.

Modern Systems can help you to provide good online or offline services by addressing the internal and external customers challenges and find an innovative way to help everyone to achieve their goals.

Modern Systems have good experience in different software specializations, the following considered the main common frameworks used by many organizations worldwide and Modern Systems can help the organization by providing software solutions and processes analysis.

2.6 Food

2.6.1 Food Information

Visit Clinic provides a search service for a specific type of meal or food in the international market

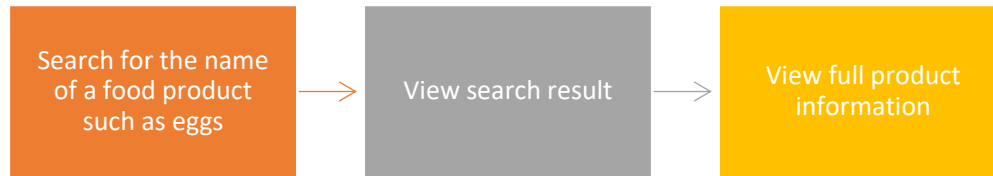

in order to know the details of the nutritional values available in the meal or food, such as protein information and other nutritional information. Food is the main life fuel for the human body, and each type of food has its own benefit. Food can be divided into five main food groups:

- Grains: includes foods such as bread, pasta, corn grains, and others.
- Dairy: Contains proteins, calcium, and vitamins.
- Vegetables and fruits: rich in fiber and vitamins.
- Fats, sweets and oils: includes sweeteners, sugar, oils, and fats.
- Proteins: include poultry, meat, beans, eggs, and others.

There are some tips for eating healthy:

- Eat in moderation and within the appropriate calorie range.
- Variety in foods eaten.
- Reduce the intake of fatty foods and sugars.
- Drink appropriate amounts of water.
- Make sure you eat a balanced breakfast.

Visit Clinic website helps all users to obtain information about various foods and meals known worldwide, such as the meals of famous restaurants such as KFC, soft drinks such as Coca-Cola, and general foods such as cheese and others. Each type of food has a number of information such as vitamin C, A, D, calcium, fat percentage and other information that benefits users from controlling their meals in order to help gain weight or lose weight.

2.9.3 Search for intermediate medical product

The active substance in the drug is the primary component that causes the pharmacological effect of the drug. It is this substance that has a beneficial or harmful effect on the organism and is present in the pharmacological preparation. When a person takes a drug containing a mixture of chemical compounds, the effectiveness comes from an active ingredient or carrier of the pharmaceutical/therapeutic property.

Some pharmaceuticals contain more than one active ingredient. On the other hand, of the active ingredients, there are the inactive ingredients, which are called in pharmaceutical texts excipients. The main excipients are used as a carrier medium for the active ingredient and are often called the carrier medium or carrier material.

The drug search service is a service that allows the user to search for a drug through the site. Visit Clinic website helps users to search for medicines registered on the site as the additive on the drug.

3. Human Medical Drugs Library

Human medicines are any substance used in the diagnosis or treatment of human diseases, or that are useful in alleviating or preventing them. The drug often increases or decreases a function in the body, and does not create a new one. Officially, it is every drug that is legally licensed for use after ensuring that it is (relatively) free of any physical or psychological harm to the person who uses it. We use most medications to cure certain diseases, such as using antibiotics to cure an infection, to treat certain conditions, such as treating depression with antidepressants, or to relieve symptoms such as the use of painkillers to relieve pain. The drug is also used in the prevention of diseases such as serums such as influenza serum.

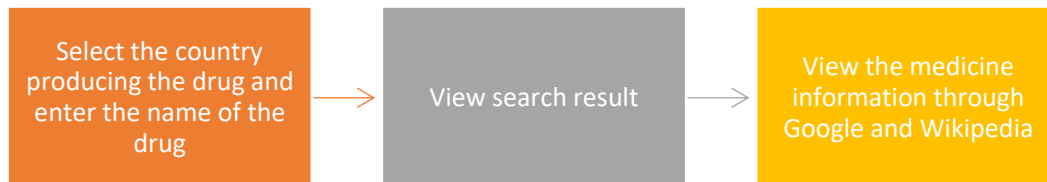

3.1 Search for medicine

The drug search service is a service that allows the user to search for a drug, and view its prices.

Visit Clinic helps doctors and pharmacists search the encyclopedia of medical drugs, which contains ten countries and the encyclopedia is linked to Google and Wikipedia to search for free information for each type of drug.

4. IT Infrastructure Library

ITIL, short for Information Technology Infrastructure Library, is a set of concepts and practices for managing information services (information technology). The IT Infrastructure Library gives a detailed description of a number of important IT practices, provides comprehensive checklists, as well as tasks and procedures that any company can modify to suit its needs.

ITIL is used to increase the value of IT for business by adapting IT operations to business needs. The fundamental foundation of value creation is the improvement of IT services .

This set of concepts and practices has been called ITIL in English. The first book on the IT Infrastructure Library was published in 1989. These comprehensive guidelines, books, consulting tools, and software are used to create a service management system and provide a heuristic approach to organizations on how to use IT as a tool to facilitate business, transformation and growth.

4.1 Service Catalogue Management

The IT Services Catalog is the only source of accurate information on all IT services provided by the company's IT management. The catalog is the hub of a database containing accurate information about active IT services, and is part of the IT Service Providers service portfolio. Catalog management is a key practice in managing IT services, and helps organizations overcome many challenges.

Visit Clinic provides four mechanisms of ITIL methodology that help employees and IT administrators to provide excellent services. The service provided is called Catalog Management or IT Service Catalogue, which helps to add a new catalog to the services provided internally.

Language	Youtube Link
English	https://www.youtube.com/watch?v=vRz2oyQbbTY

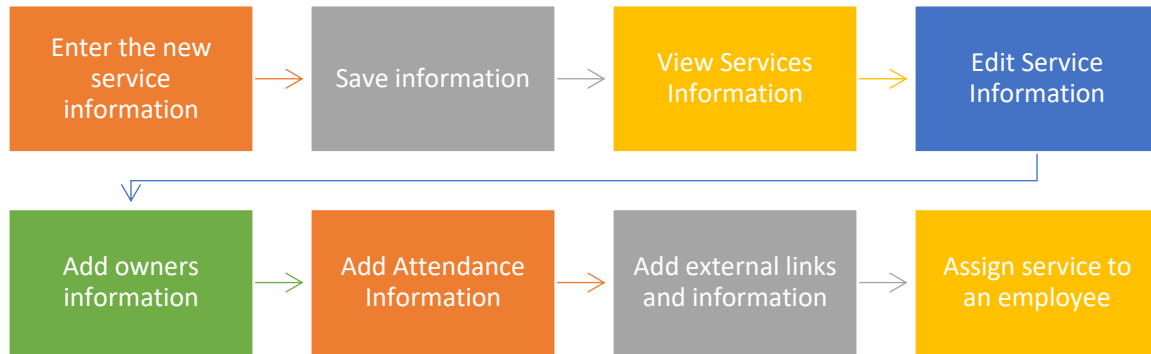

4.2 Knowledge Management

Knowledge management in ITIL (ITIL KM) is the centralized process that receives input from all other ITSM processes and is responsible for providing knowledge supporting all ITSM operations when needed.

The primary goal of knowledge management at ITIL is to improve performance and data retention within the company. A Service Knowledge Management System (SKMS) is a set of systems, tools and databases that knowledge management requires to be successful. It is the responsibility of knowledge management in ITIL to maintain the knowledge management system of the service, which represents the sum of the body of knowledge within the organization.

Visit Clinic provides four mechanisms of ITIL methodology that help employees and IT administrators to provide excellent services. The service provided is called ITIL service knowledge management process, which helps to add a description of one of the challenges facing employees within the organization.

4.3 Incident Manaement

Incident management in ITIL is a framework used in IT service management to deal effectively and efficiently with incidents that disrupt or reduce the normal functioning of IT services. In the context of ITIL, accidents are defined as unplanned disruptions or impacts on IT services that reduce the quality of service .

Incident management is a way for organizations to appropriately deal with and resolve incidents as soon as possible. The incident management process in ITIL is the methods and procedures for addressing and resolving severe incidents. This process includes ways to monitor, detect, and report incidents, who deals with the incident, and through what steps the incident is resolved.

For ITIL incident management best practices, effective incident management for business and companies should follow certain practices. Some of the techniques we will consider include incident recording, resolution, ordering, monitoring, and reporting .

Visit Clinic provides four mechanisms of ITIL methodology that help employees and IT administrators to provide excellent services. The service provided is called ITIL Incident management process.

4.4 Request Fulfilment

The ITIL Request Fulfilment process is intended to fulfill service requests, which in most cases are minor (standard) changes – such as password change requests or information requests. Request Fulfilment has been added as a new process to ITIL to specifically handle service requests .

The Request Fulfilment process now consists of five subprocesses to provide a detailed description of all activities and decision points. The process has interfaces with incident management.

These are the subprocesses of ITIL Request Fulfilment and their objectives :

The Request Fulfilment process now consists of five subprocesses to provide a detailed description of all activities and decision points. The process has interfaces with incident management.

These are the subprocesses of ITIL Request Fulfilment and their objectives:

- Order execution support: To provide and maintain tools, processes, skills and rules to deal effectively and efficiently with service requests.
- Registration and classification of the application: to register and classify the service request with the appropriate dynamic and verify the authorization of the applicant to submit the application, in order to facilitate quick and efficient processing.
- Implementation of the application form: to process the service request in an agreed timetable.
- Monitoring and escalation of demand: to monitor the status of ongoing processing of pending service requests, so that countermeasures can be introduced as soon as possible if the level of service is likely to be violated.
- Close and evaluate the order: to send the order record to the final quality control before closing it. The goal of this is to ensure that the service request has actually been processed and that all information required to describe the application lifecycle has been provided in detail. In addition, the results of the application processing must be recorded for future use.

Visit Clinic provides four mechanisms of ITIL methodology that help employees and IT administrators to provide excellent services. The service provided is called technical request management or ITIL service request fulfilment management process, which helps add a challenge facing the employee within the organization.

5. Pharmacy

A pharmacy is a retail store that provides medicines, drugs, pharmaceuticals and other products.

The pharmacist oversees the fulfillment of prescriptions and is available to advise on his medications. Pharmacists dispense medicines according to doctors' recommendations and prescriptions, and they also dispense other medicines (shelf medicines) that do not require a prescription. Your pharmacist can provide general information about medications, vitamins or how to use adjuvants, such as patches, bonds, inhalers, many healthy herbs, etc.

5.6 Low Stock Medicine

The pharmacy deficient medicine service is a service that allows the pharmacy to track medications that may be missing or not currently available in the pharmacy.

This service offers many advantages, including:

- Check availability: The pharmacist can check the availability of medicines at the pharmacy before sending their order.
- Order missing medicines: If medications are not available, users can order them online.
- Report missing medicines: Pharmacies can use this service to inform users when medicines are available.

Visit Clinic provides the ability to synchronize the pharmacy program with the VisitClinic website in order to report the missing drugs in the pharmacy and send these medicines to the drug store officer later.

Pharmacy Program

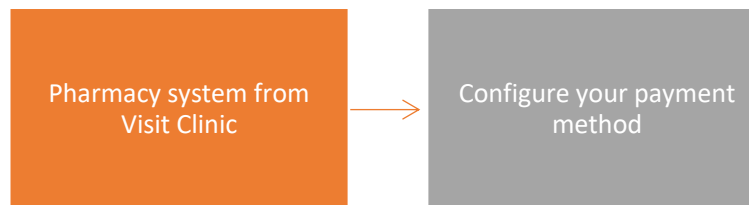

- Synchronization of pharmacy software with Visit Clinic website

Website

- Verification of deficiencies through the report
- Make a request for medicines to the drug store official

5.7 Payment configurations

Payment method configuration service is a service that allows the pharmacist to add or modify the methods of financial transactions of the pharmacy such as the accounting tree, payment method and bank account number of the pharmacy.

5.8 Track Image Prescription

Ordering medicines from the pharmacy online is a service provided by some pharmacies and websites to facilitate access to medicines and health products.

Visit Clinic website provides the ability to send a request for medicines from the website to the pharmacy for individuals registered on the website and the request in the form of a photo, so that the service provides the ability to attach a copy of the prescription / prescription and send it to the pharmacy.

The pharmacist receives the application and follows it up from the pharmacy and sends the required medicines to the applicant through the delivery service available in the pharmacy.

User

- Add a request for medicines in the form of a picture
- Follow-up request

Pharmacist

- Review requests
- Preparing applications and sending them to the service applicant through the pharmacy delivery service

5.9 New order to medical sales agent

The drug store ordering service is a service that allows a pharmacist to order medicines and pharmaceutical products online. Visit Clinic provides the ability to send a drug order from the website to a drug store or sales representative of a pharmaceutical company.

The pharmacist enables him to add the required medicines from the site, choose the company and the person to whom the order is to be sent, and send the request. The receiver of the order can review the request, modify the quantities and prices, and send the request back to the pharmacist in order to deliver the order to the pharmacist and the site provides the possibility of printing the application with old and new prices and quantities.

The representative of the pharmaceutical company delivers the request for the required medicines to the pharmacy with the financial claims invoice.

Pharmacist

- Add a request for medicines, choose medicines and view their information through Google and Wikipedia
- Follow-up request

Drug Store, Pharmaceutical Company Sales Representative, Medical Supplies Store

- Order review, quantity adjustment, price adjustment
- Print the order, prepare the application and send it to the service applicant through the delivery service at the pharmacy

5.10 Migrate pharmacy orders to general ledger (GL)

Converting daily invoices into invoices in the ledger account involves several steps:

- Recording financial transactions: Financial transactions are recorded in the journal in the form of accounting entries through the website.

- Analysis of financial operations: The debtor and the creditor in each transaction are determined automatically.

- Posting: After financial transactions are recorded in the journal, these entries are posted to their accounts in the ledger. This means that each debit amount that is recorded in the journal is posted to the debit side of the account page (ledger page), and every credit amount that is recorded in the journal is posted to the credit side of the account page in the ledger

Visit Clinic provides the pharmacist with the ability to convert daily invoices into invoices in the accounting professors account by searching by date, displaying invoices and converting them into an invoice form on the accounting system. Later, invoices that have been transferred from the pharmacy to the accounting ledger account system can be displayed.

Pharmacist

- Service configuration
- View one-day sales reports only
- View sales information
- Transfer invoices to the professor's account

Human Resources

- View company incoming reports

5.15 Pharmacy offline sale program

Pharmacy programs offer several basic advantages:

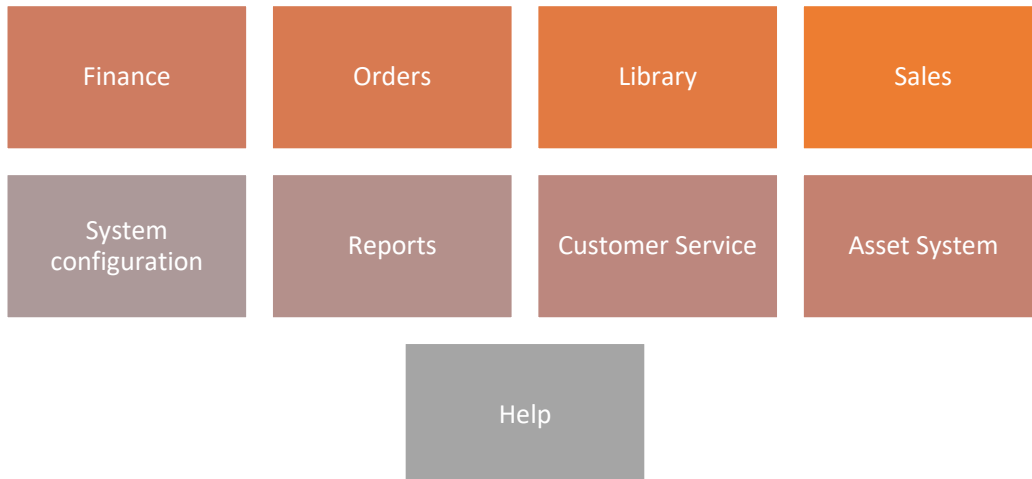

- Simplify pharmacy management: Pharmacy software is designed to streamline pharmacy management and operation.
- Workflow optimization: This innovative technology helps pharmacists; pharmacy owners and employees improve workflows.
- Ensure regulatory compliance: Pharmacy programs ensure compliance with applicable laws and regulations.
- Improve patient care: By improving patient care, pharmacy software can help attract new customers and retain existing ones, increasing revenue and profitability.
- Increase efficiency: By automating and streamlining pharmacy processes, pharmacy software can increase efficiency and productivity, resulting in cost savings.
- Reduce errors: Pharmacy software can help reduce errors in the processing of prescriptions and invoices, resulting in reduced claims rejections and improved reimbursement rates.
- Inventory management: Pharmacy software can help improve inventory management, reducing stock depletion and improving cash flow management.

Visit Clinic supports pharmacies with a program for offline pharmacies, which aims to facilitate pharmacists to provide the best possible service. The program provides the following information:

- Encyclopedia of medicines in Egypt up to 13 thousand types of medicine
- A group of names of pharmaceutical companies in the Arab world with ways to communicate with them

Visit Clinic helps emerging pharmacies by offering a system that serves the basic needs of the pharmacy. The needs that are provided on a daily basis to customers, pharmacists and pharmacy workers. The system does not require an Internet connection. The system provides the following services:

Unit	Information	
Sales	Pharmacy Sales	Daily sales of the pharmacy through the program by adding new customers and issuing invoices for the sale and return of a product according to the pharmacy policy.
	Pharmacy Returns	
Library	Medical products	Medical products include a wide range of tools, devices and equipment that are used in healthcare. The program offers more than 13,000 types available in the local market and the pharmacist can add new drugs to the program or modify existing ones.
	Store	The store in the pharmacy is where medicines and medical supplies are stored. Managing the store properly is an essential part of the business process in pharmacies. The pharmacist can add quantities of a certain type of medicine, as this is reversed in the sales process and issue drug deficiencies reports.
	Customer	Pharmacy customers are people who use pharmacy services and buy products from them. The pharmacist can add new customers to the program or update the data of a customer.
	Medical Companies	Medical companies are companies that provide medical products and services. There are many

		well-known medical companies. The program provides fifty local companies with e-mail, address and contact numbers, the pharmacist can add a new company or update the company's data.
	Sales Representatives	Pharmaceutical sales representatives are people who work for pharmaceutical companies and their main task is to promote pharmaceutical products to doctors, pharmacists and other healthcare professionals. Their functions include: • Provide information: They inform doctors about new products, treatments and new medicines. • Product promotion: They promote pharmaceutical products to doctors and pharmacists. • Education: They provide essential knowledge and medicines to health institutions and consumers. The program provides the pharmacist with adding new sales representatives or updating the representative's data.
Orders	New pharmacy order	New pharmacy order of medicines means the order made by the pharmacy to medical companies or suppliers to purchase medicines and medical products that need to be replenished in stock. This demand depends on several factors such as: • Demand for medicines: If certain medicines are selling quickly, the pharmacy may need to order more of these medicines. • Current stock: If stock is low for certain medications, your pharmacy may need to order more of these medicines. • Expiry date: If there are medicines approaching the expiration date, the

		pharmacy may need to order new medicines. The program provides the service of adding a new drug request in order to print it and send it to a drug representative or drug store.
	Search for an order	Searching for an order in the pharmacy drug store means searching for medicines or medical products that have been ordered by the pharmacy and that must be provided in the store. This can include searching for pre-ordered medicines and checking their availability in stock.
	Transfer an order to the warehouse	Transferring an order to the store in the pharmacy program means transferring medicines or medical products that have been ordered by the pharmacy to the store. This process involves updating inventory to include new medicines or medical products.
	Converting the missing products in the pharmacy to a new order	Converting missing products in the pharmacy to a new order means that the pharmacy is preparing a list of medicines or medical products that have run out of stock and need to be re-supplied. This list is sent to supplier companies or medical companies to order more of these products.
Finance	Accounting tree	The accounting tree in pharmacy software is an organizational structure that displays all accounting accounts used in the program. This tree helps organize accounts and provide an overview of financial statements.
	Transfer sales to LUC system	Transferring sales to the ledger account system in the pharmacy software means recording all financial transactions related to sales in the accounting system of the program. This process helps in tracking revenues and expenses and providing accurate financial reports.
	New Invoice	An invoice is a document proving the transactions of the sale of medicines and medical products. They usually contain details such as the name of

		the customer pharmacist, the date of sale, the quantity and medicines sold, and the price.
	Find an invoice	Searching for an invoice in the pharmacy software means searching for specific details for a specific invoice in the program. This process helps in tracking financial transactions and providing accurate financial reports.
Asset System	Add a new asset type	Add a new asset label to use with assets
	Modify an asset type	Update the original text information
	Adding an asset to the pharmacy	Adding a new asset type in the pharmacy program means adding a new type of fixed asset to the program. Fixed assets are assets that are used for the long term in the business process, such as buildings, equipment, and furniture.
	Search and modify asset data	The asset type modification service in the pharmacy program allows you to change the details of a specific type of fixed asset present in the program. Fixed assets are assets that are used for the long term in the business process, such as buildings, equipment, and furniture.
Customer Service	Add a customer service request to the pharmacy	Adding a customer service request to the pharmacy means that the customer submits an order to purchase products or services from the pharmacy. This can include ordering medicines, medical supplies.
	Search for customer orders	Searching for customer orders in the pharmacy program means searching for certain details of customer orders that have been placed in the program. This process helps in tracking orders and providing better customer service.
Human Resources	Contracts	Employee contracts are legal agreements between an employer and an employee that define the terms of employment. These contracts usually include details such as salary, hours worked, job

		responsibilities, vacations, probationary period, and other terms.									
	Salary	Salaries are the cash payments that employees receive for the work they do. A monthly salary can be added for each employee through the system.									
	Attendance, permission and departure	Attendance, permission and departure are terms used in human resource management to track employees working hours. - Attendance: refers to the time when the employee starts the working day. - Permission: refers to the times when an employee leaves the workplace for personal or emergency reasons during working hours. - Departure: refers to the time when the employees working day ends. The pharmacist can record attendance, departure and permissions for each employee.									
Reports	Reports	Pharmacy software reports are a set of data and information that are collected and analyzed to provide an overview of pharmacy performance and operations. These reports typically include information about sales, purchases, inventory, profit and loss, and other financial and operating data. The program provides the following reports: <table border="1"> <tr> <td>Store</td><td>Products</td><td>Sales</td></tr> <tr> <td>Medical Companies Representatives</td><td>Medical Companies</td><td>Customer</td></tr> <tr> <td>Asstes</td><td>Bills</td><td>Orders</td></tr> </table>	Store	Products	Sales	Medical Companies Representatives	Medical Companies	Customer	Asstes	Bills	Orders
Store	Products	Sales									
Medical Companies Representatives	Medical Companies	Customer									
Asstes	Bills	Orders									

		Attendance and departure	Contracts	Customer Service
				Salary
	Configure reports	Preparing reports in the pharmacy program means modifying and customizing reports based on the needs of the pharmacy. The program changes the language interface to Arabic or English.		
	Dashboard	The dashboard in the pharmacy program is an interface that provides you with an overview of pharmacy performance and operations.		
System configuration	Pharmacy Data	Pharmacy information is general information such as name.		
	Backups	Backups in the pharmacy program means making a backup copy of all the data and information in the program. This process helps protect data from any loss or damage that may occur.		
	Language	Language in pharmacy software refers to the language that is used in the program interface. The program provides Arabic and English.		
	User settings in the program such as adding an employee, adding or modifying permissions	User permissions in the pharmacy software determine what users can do and access in the software. These powers usually depend on the user's role in the pharmacy.

5.16 Inventory

Inventory management software is designed to track and manage items through various stages along the supply chain. It helps businesses automate inventory processes, operate efficiently, and increase profits. The software offers features like stock level management, inventory item categorization, sales order and purchase order tracking, barcode scanning, and automatic reorder point purchasing.

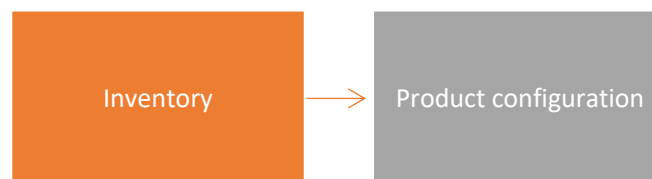

5.16.1 Product configuration's

Product configuration is the process of customizing a product to meet the specific needs of a customer. This can be done either by the customer themselves through eCommerce channels, where available options for a product are selectable, or the sales/product engineer can configure the product based on the customer's requirements.

Visit Clinic portal provide an excellent solution to the pharmcesist in order to to add medical product configuration.

5.16.2 Inventory - add product

Adding a new product to inventory, in the context of inventory management, refers to the process of introducing a new item into your existing stock or inventory system.

Visit Clinic portal provide an option to add product to the inventory.

6. Doctor

A doctor is a person qualified to provide treatment to individuals suffering from diseases. A

doctor is also defined as an individual who holds a license (certificate) to practice medical work, such as a dentist and a surgeon. Another definition of a doctor is a person who prescribes medication to treat patients by applying a medical examination to them .

The profession of a doctor is the job associated with providing medical treatment to patients with injuries and diseases, and includes prescribing conventional treatments such as drugs, providing primary health care, or specializing in a specific field of medicine such as pediatrics, neurology, psychiatry, ophthalmology, anesthesiologists, and others .

The doctor must have professional and professional ethics, such as:

- Wisdom: The doctor's ability to think accurately about using appropriate expressions.
- Patience: The doctor endured patients at all times.
- Kindness: Dealing gently and easily with all patients.

7.1 Add room to the clinic

The service of adding a room to the clinic may be part of the medical clinic management system.

This system is a set of technologically advanced tools combined to help and simplify the daily operations of the clinic. The practice management system simplifies many processes such as patient management, appointment scheduling, physician schedules, prescription management, payments, transactions, and invoices.

Adding a new room to the clinic may be related to expanding the clinics services or improving its ability to handle a larger number of patients. This should be done in accordance with local health standards and laws. For more details, you can check with the competent authorities in your area or consult an expert in healthcare management .

The doctor can add a room to the clinic and this is available for large clinics where medical operations can be performed and the doctor needs to add knowledge for operations, recovery, subsistence or detection. Visit Clinic provides the advantage of adding a room to the clinic in order to organize, arrange and follow up the clinic. The room may contain pictures or appliances such as a ceiling fan or a TV.

7.9 Booking a patient in the clinic

Performing surgery requires some basic steps:

- Clinical evaluation: The patient's condition must be fully evaluated. This includes taking detailed information about the patients' previous illnesses, surgeries in the past, and medications the patient is taking.
- Medical tests: Some laboratory and radiological tests may be required depending on the patient's condition and type of operation
- Medications: If the patient is taking medications permanently to treat chronic diseases, he may need adjustments to these medications before or after the operation.
- Booking: Reservations are made online through the website from the doctor or officials.

Visit Clinic provides the advantage of booking the patient in the clinic in order to perform surgery or follow up on his health condition. The booking data starts from the receptionist who enters the patient's basic data such as general information such as (mobile, names of relatives) and the insurance company. After filling in the data, the patients file can be sent to the doctor in charge.

7.12 Discharge of the patient from the clinic

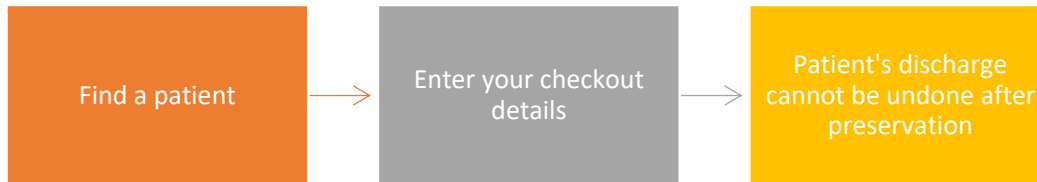

The patient discharge service from the clinic or hospital includes several steps and procedures to ensure patient safety and continuity of health care after leaving the hospital.

This service includes:

- Discharge assessment: The patients treatment plan, including discharge or transfer details, is developed and discussed with the patient.
- Medications: If the patient is given any medicine to take home.
- Medical devices: If the patient is sent home with a medical device, it must be ensured that the patient knows how to set up the device and teach him how to use it.
- Transportation organization: The patient should arrange with a relative or friend to pick him up, or staff should be informed if they need to make other transportation arrangements for the patient.
- Go home: Make sure that the patient has everything he needs to recover.

Visit Clinic provides a patient discharge service from the clinic or dispensary in order to complete the reservation procedures and close the operation or reservation file.

The doctor can prepare the payment in terms of cost for the visit and prepare the accounting tree.

7.21 Transferring the clinics revenue to the professor's account

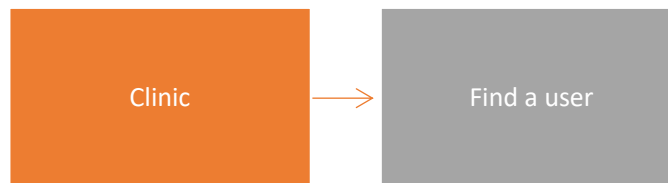

The doctor can transfer the clinics revenue to the professors account after reviewing the schedule of statements.

7.22 Find user

The doctor or clinic employee can search for information registered on the site, such as social networking sites, to know the information and ways to contact him in case of necessity.

8. Office Services

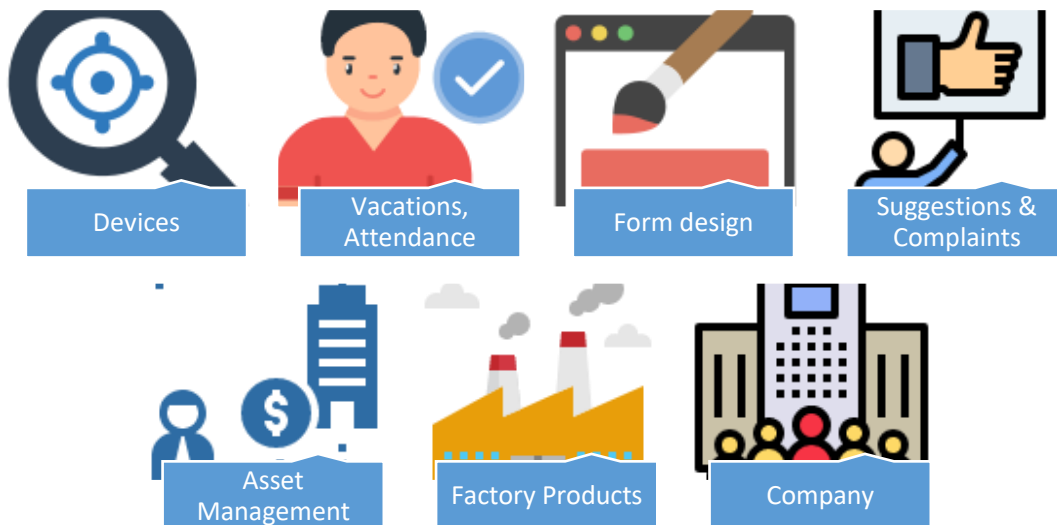

E-service is a concept that involves the use of ICTs to provide services. This concept includes several different definitions, but all agree on the role of technology in facilitating services and converting them from traditional services to electronic services. Paid services usually refer to services that are provided for fees or sums of money .

Service is defined in the Arabic language as providing assistance or grant, or providing care to a specific party, or to the general public, and the concept of service means idiomatically: a person performs an activity, for the benefit of other individuals or the public, and the definition of service varies according to its type, the service that means the function of housekeeping, differs from that provided by the state to citizens in various fields, and from the duty that the soldier bears towards protecting his homeland on the borders, and in places of war.

More precisely, e-services are "actions, efforts, and performance conveyed using information technology, including sales services, customer service, and delivery services". This definition reflects three main elements of the concept of e-services, namely :

- Service provision: For example, government agencies that provide e-services to citizens and companies.
- Receiving the service: Citizens and companies are considered recipients of this service.
- Delivery Service: The method of delivery of this service is the third element of electronic services.

8.1 Company Management

Company management, also known as corporate management, is the process of managing an organization. It involves collecting information for planning and decision-making purposes and then implementing strategies that may help the organization reach its goals.

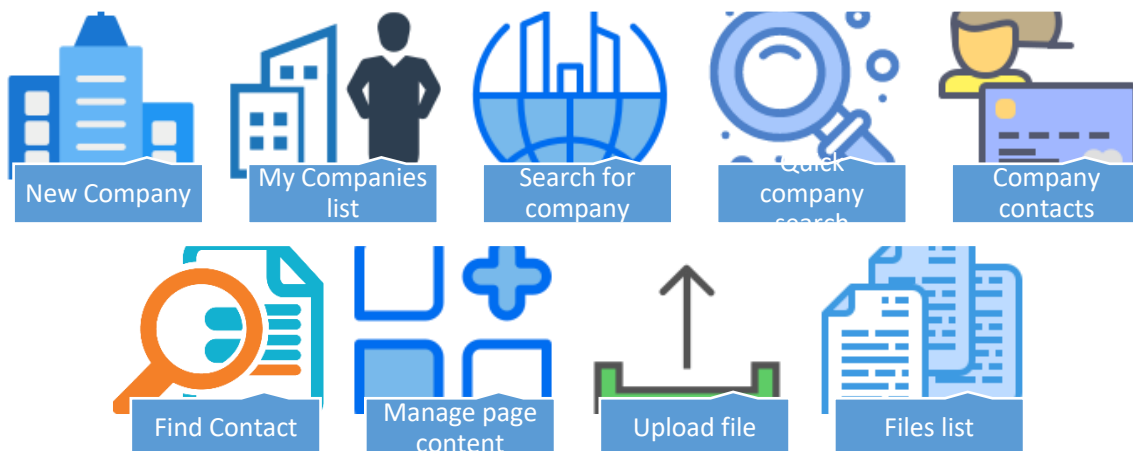

Management in business is the administration and coordination of resources and activities to achieve specific goals in an effective and efficient manner. It involves setting the strategy, overseeing the operations, and controlling the performance of the organization.

Management can also refer to the hierarchy of staff members who have the authority and responsibility to carry out these tasks. Tasks include setting the organization's strategy and coordinating the efforts of staff to accomplish these objectives through the application of available resources.

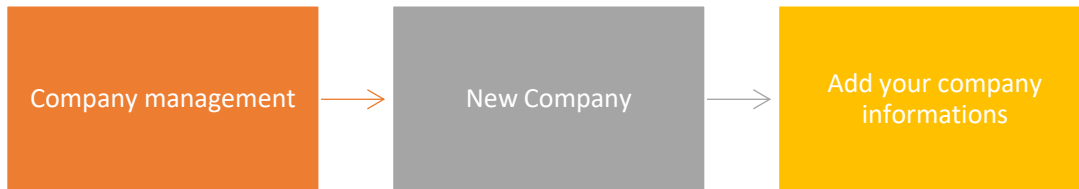

In essence, company management is how businesses organize and direct workflow, operations, and employees to meet company goals. The primary goal of management is to create an environment that lets employees work efficiently and productively.

Visit Clinic provides the advantage of searching and adding to the clinic's devices and equipment such as the dentist's chair. A device can also be added for sale and can be searched and sold through the site. Visit Clinic does not interfere in the buying and selling process between the company that offers the products and the doctor who buys the products.

8.1.1 New company

A new company, in the context of a website, typically refers to a recently formed business that has established its online presence through a website. This website serves as the digital face of the company, providing information about its products or services, its mission and values, and contact information.

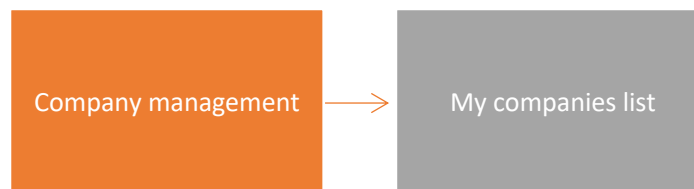

8.1.2 My Companies list

My companies list refers to a feature that allows users to manage multiple companies or business profiles from a single account. This is particularly useful on platforms like Google My Business, where a user might be managing multiple business listings.

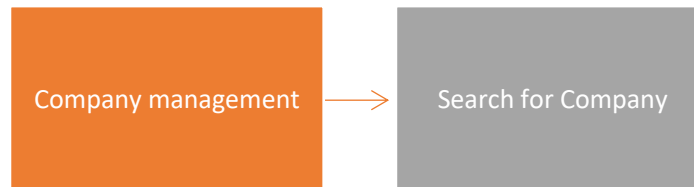

My companies list represents a separate business profile, complete with its own set of information like business name, category, location, hours, and more. Users can select a company from the list to view or edit its profile.

8.1.3 Search for company

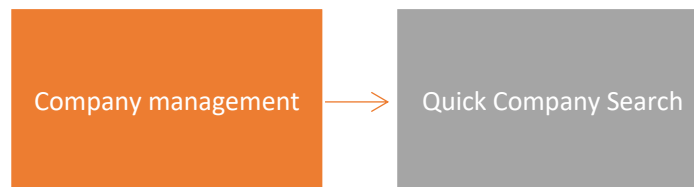

Search for Company function allows users to find specific information about a company or business entity. This could include general information, precise details, the corporate name, registered address, shareholder and director names.

8.1.4 Quick company search

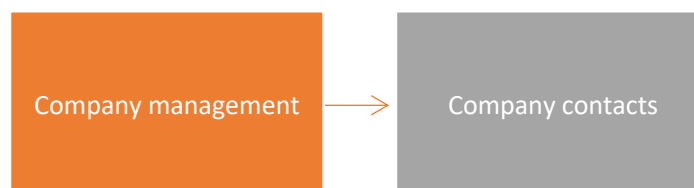

Quick Company Search feature is a functionality that allows users to rapidly find specific information about a company or business entity. This feature is typically designed to provide instant results as the user types, helping them find the desired company in a quick and efficient manner.

8.1.5 Company contacts

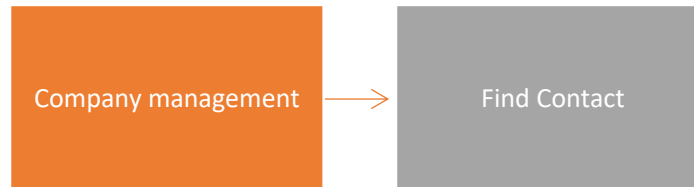

Company contacts refer to the information that allows users or customers to get in touch with a company. This can include the company's address, phone number, email address, and social media handles.

8.1.6 Find Contact

Find Contact feature is a tool that allows users to locate the contact information of a specific individual or company. This could include email addresses, phone numbers, physical addresses, or social media profiles.

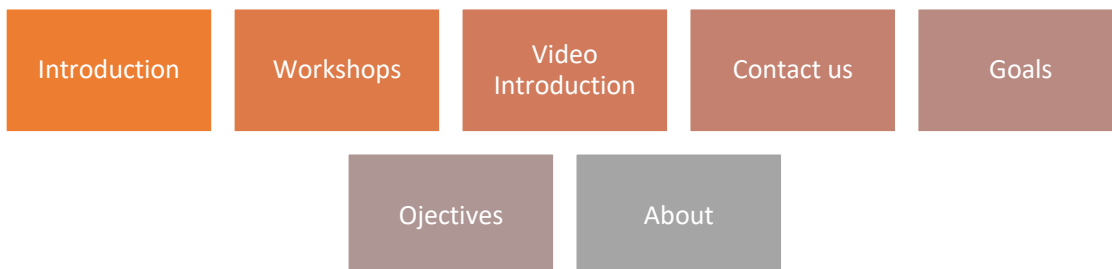

8.1.7 Manage page content

Manage Page Content is the process of creating, editing, organizing, and publishing content on a webpage. This is typically done using a Content Management System (CMS), which is a software that helps users create, manage, and modify content on a website without the need for technical knowledge.

Visit Clinic provides the essential informations required to company in order to provide the general informations.

Public User

- Search for company information
- Display the available informations

Subscriptions users

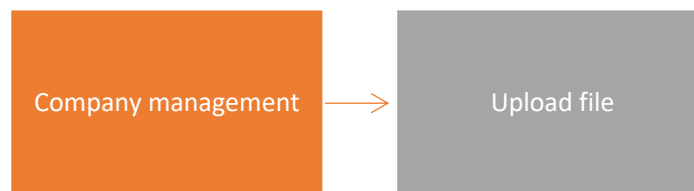

- Add and modify company informations

8.1.8 Upload file

Uploading a file is the process of transferring a file or data from your computer or device to another location, such as a website or a cloud service. This can be done by dragging and dropping files, or by choosing them from your folders. After uploading files, you may get a unique URL to share them with others.

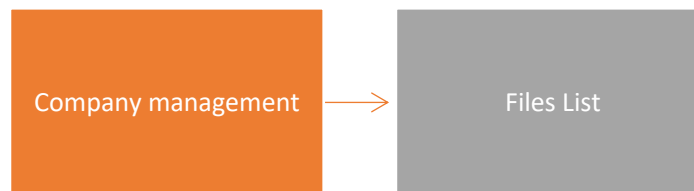

In the context of a website, uploading files means transferring documents, images, videos, and audio files to your website. For example, you may need to upload product images and videos on your website, and similarly, you may need to upload PDF documents so users can view them.

8.1.9 Files list

Files List refers to a feature that allows users to view a list of files available for download or interaction. This could include various types of files such as documents, images, videos, audio files, and more...

8.2 Devices

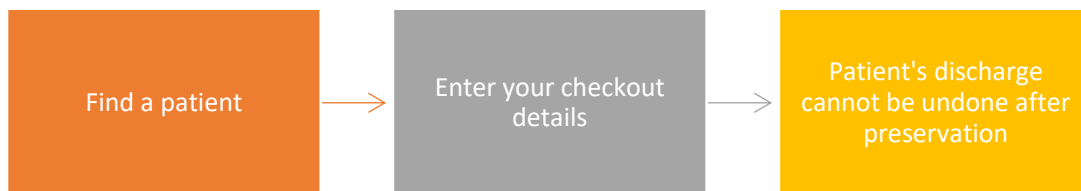

Medical supplies are a set of equipment and tools used by doctors and nurses in the medical field. The list of medical supplies includes many things such as:

- Medical syringes: There are a number of medical syringes that are relied upon in the medical field.

- Cannula devices Installation of medical solutions: In order for medical solutions to be professionally installed, medical supplies must be available from intravenous devices and cannula.
- Medical solutions of various types: There are among the medical supplies that must be present in the emergency department and surgeries in hospitals.
- Hearing aids of different brands: Proper diagnosis starts from the use of a stethoscope of a distinct type and a well-known medical brand.
- Medical pressure devices of various brands: Microbarbaric devices help the doctor to give the right medicine to a patient.

Visit Clinic provides the advantage of searching and adding to the clinic's devices and equipment such as the dentist's chair. A device can also be added for sale and can be searched and sold through the site. Visit Clinic does not interfere in the buying and selling process between the company that offers the products and the doctor who buys the products.

8.3 Vacations & Permissions

The attendance system is one of the most important issues that the Human Resources

Department works on mainly. It consists in documenting the attendance and departure of employees and counting the time they spent at work. This system depends on the policy in which the company operates, and is reflected in all the companys performance, employee productivity and achievement of goals in the end.

The importance of the attendance and departure management system includes:

- Productivity: The greater the discipline, the greater the productivity expected of employees.
- Streamlined operations and operation: Attendance control is one of the most important issues that help enhance the flow and speed of work in companies.
- Accurate salary process: One of the most important factors affecting the salary flow is attendance and departure.
- Overtime: Overtime is considered an increased cost for companies.
- Discipline: One of the most important values that affect the work environment in general is the principle of commitment to discipline.

Visit Clinic provides the ability to submit an apology request for late arrival for work or a vacation request. The request is sent to the manager to verify the request and respond to it with acceptance or rejection.

Vacations

- Add a new vacation

Permissions, late attendance

- Add a new ear.

8.5 Suggestions and Complaints

Suggestions and complaints management is the process that deals with customer complaints and suggestions in a company. The goal of this department is to enhance customer loyalty and quality assurance. Criticism is evaluated in a systematic and systematic manner and used to make a positive impact.

Management involves developing strategies and determining where to receive complaints and suggestions, how to respond to them and to which departments or individuals the information obtained should be sent. Assigning responsibilities is also part of complaint management. Only when it is clear who should react in each case can negative criticism be turned into something positive.

Visit Clinic provides the ability to add a service improvement request or customer service report through the website. Customer service report after addition enables the employee of the medical institution to transfer the report between employees in order to follow up the report.

Suggestions & Complaints

8.7 Factory Products

A factory is a building or group of buildings in which products are made. Factories range in size from small workshops to buildings that fill an entire city. Workers and machinery inside factories convert raw materials and parts into ready-to-use products. A medical factory is a place where medical products are manufactured, which may include medicines, medical devices, supplements, and others.

These plants are operated according to a set of standards and rules known as "Good Manufacturing Practices" (GMP), which ensures that products are manufactured in safe and efficient ways. In addition, a medical plant can refer to medical laboratories where scientific experiments, tests and measurements are carried out.

8.7.1 Add a new product

Medicinal products are devices, materials, or software that are used in health care to diagnose, prevent, monitor, treat or mitigate diseases or injuries. Visit Clinic website provides the possibility of adding a product to the factory in order to introduce the product and introduce users and researchers about the product through the Visitclinic website, where the site provides very distinct capabilities in introducing the medicinal product. A medical product may be a pharmaceutical manufacturing device or a product of one of the medical authorities, such as a medicine attic. The site provides the following services:

Add a new product

- Add Product Information

Product List

- View all user-specific products
- Choose the desired service and add the necessary information

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=J2f9uj3sE3Q

8.7.2 General Information

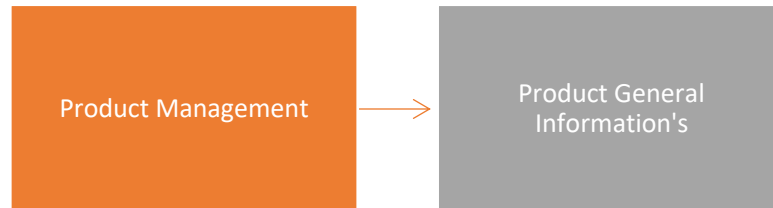

Medicinal product information includes a range of product-related data, which can include the following:

- Product name: It is the name under which the product is marketed.
- Active substance: It is the substance that leads to the medicinal effect of the product.
- Pharmaceutical form: refers to the form taken by the product, such as pills, capsules, injections, etc.
- Package size: refers to the amount of product that each package contains.
- Selling price of the product: It is the price paid by the consumer to purchase the product.
- Uses: refers to the diseases or conditions for which the product is used.

- Side effects: Any unwanted effects that may occur as a result of using the product.

Visit Clinic provides the ability to add general information for the product manufactured from the medical factory.

Language	Youtube Link
English	https://www.youtube.com/watch?v=gTbmkatkyE

8.7.3 Product Policy

Product policy is defined as the broad guidelines related to the production and development of a product. These policies are generally decided by the top management of a company. It is concerned with defining the type, volume, and timing of products a company offers for sale. Good product policies are the basis on which the right products are produced and marketed successfully.

A product policy generally covers the following:

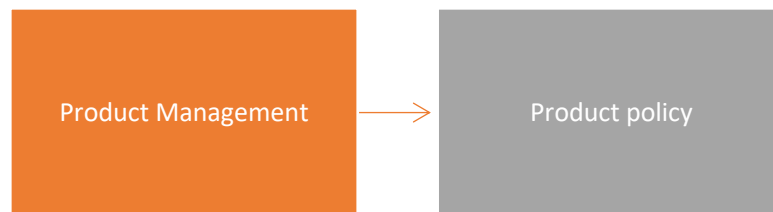

- Product Planning and Development: This involves making out and supervising the search, screening, development, and commercialization of new products, the modification of existing lines, and the discontinuance of marginal or unprofitable items.
- Product Line: This refers to a group of products that are closely related because they function in a similar manner, are sold to the same customer groups, are marketed through the same types of outlets, or fall within given price ranges.
- Product Mix: This refers to the total number of product lines that a company offers to its customers.
- Product Branding: This involves the creation of a unique name and image for a product in the consumers mind, mainly through advertising campaigns with a consistent theme.
- Product Positioning: This is the process marketers use to determine how to best communicate their products attributes to their target customers based on customer needs, competitive pressures, available communication channels, and carefully crafted key messages.

- **Product Packaging:** This involves the design of the products container or wrapper, which plays a role in product identification, protection, convenience, and company promotion.

The main objectives of a product policy are survival, growth, flexibility, and scalability. It needs to be flexible to the changing needs of the customers, government regulations, global trends, and economy. The companies should use their resources properly to make the most of their valuable resources. With time, the company needs to develop economies of scale to improve profits.

The medicinal product policy relates to the rules and procedures governing the production, distribution and use of medicinal products. These policies aim to ensure the safety and effectiveness of medical products and protect the health of patients.

Visit Clinic provides the ability to policies for the product manufactured from the medical factory.

Language	Youtube Link
English	https://www.youtube.com/watch?v=gTbmncatkyE

8.7.4 Product Promotion/discounts

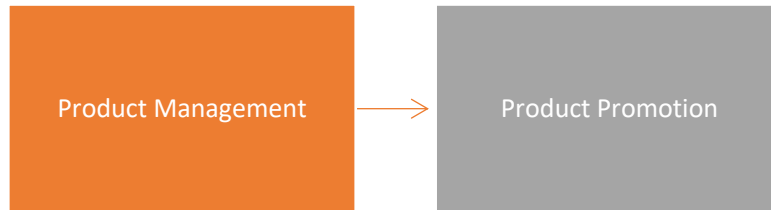

Product promotion is a form of marketing that aims to create interest and awareness in a product, service, brand, or concept among potential customers. It uses various techniques, such as advertising, public relations, social media, exhibitions, giveaways, or sponsorships, to communicate the features, benefits, and availability of the product or service. The purpose of product promotion is to generate sales and develop brand loyalty. It is one of the elements of the marketing mix.

Product promotion is the process of explaining the value of a product to potential and existing customers to educate, generate interest, and spur purchase. It is one of the four P's of the marketing mix, along with product, price, and place.

Promoting a product represents one of the four P's of the "marketing mix" model that advertisers use to reach customers and drive sales. Product promotion is important because it is an essential part of a brand's marketing strategy. It can increase brand awareness to potential consumers in the marketplace—as well as deepen customer relationships by rewarding customers via referrals, loyalty programs, or special deals—which can potentially increase sales.

Visit Clinic website provides the ability to add information about the offers made by the manufacturer regarding the device from time to time.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=vHqoaJg9XLQ

8.7.5 Product colors

Product colors refer to the specific hues and shades a company picks to represent its brand across all channels, from logo to website to packaging. The color for products can be determined by the medium used. On a monitor, display, or television screen, colors consist of red, green, and blue (RGB). But when it comes to printed media, prints, or paint for objects or dyes, cyan, magenta, and yellow (CMY) form the basis to compose colors.

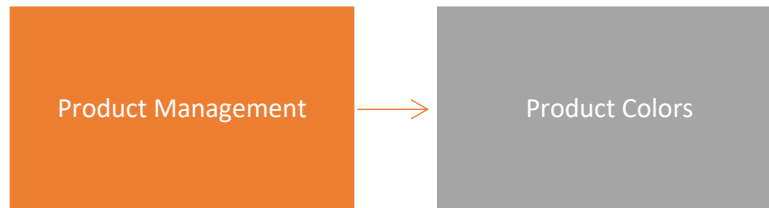

When choosing the right color for your product, packaging, or advertisement design, it's important to consider what your customer wants and the common color-emotion connections. Colors can convey a great deal about a brand. Different colors evoke different emotions and associations. For example, green can signify growth, health, and nature, while red can symbolize passion, excitement, and urgency.

A brand color formula is a set of predefined color codes representing a company's visual identity. It translates into a cohesive look and feel that resonates with their target audience and

strengthens brand recognition. The following formulas outline how to select colors for one-, two-, three-, and four-color brands.

Visit Clinic website provides the ability to add colors to the product, for example, if a specific drug manufacturing device can add the color so that when the product is displayed on the site, there is information about the colors available for the device.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=vHqoaJg9XLQ

8.7.6 Product shipping

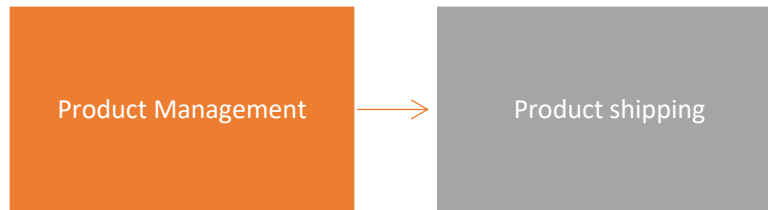

Product shipping refers to the packaging and dispatching of products from a retailer's or supplier's warehouse. It involves the physical movement of goods from one point to another, such as the moving of merchandise from the warehouse to the customer. The shipping process follows the manufacture and the packing of goods and will be controlled by a shipping or logistics company.

Shipping can take several forms depending on the distance covered and the speed of delivery necessary. The most cost-effective type of shipping is ground shipping, although it is also the slowest form. For quick deliveries, air freight would be used, however, this is also more expensive. In the case of international shipments, freight can be sent via ocean shipping, and while this is very cost-effective, it is also extremely slow, taking up to 6 weeks or longer in some cases.

In the context of ecommerce, shipping also refers to the process where, after receiving an order, the supplier ships an item from their warehouse to the customer's delivery address. This is often managed by a shipping and logistics company, especially as the business grows and it becomes less viable to handle the shipping of goods internally.

Visit Clinic website provides the ability to add the feature of adding the shipping address of the factory.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=orl88_UXAjQ

8.7.7 Sales Locations

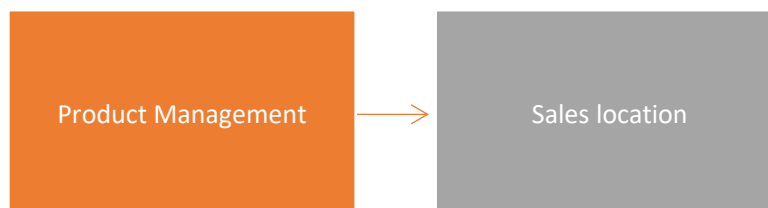

Sales location refers to the location where the customer receives the goods or merchandise. It is the place where the actual sales transaction takes place. This could be a physical retail store, an online store, or any other place where goods are exchanged for payment.

For example, over-the-counter sales, where the customer receives the item at the retail location, are coded to the retail store or outlet. In the context of online sales, the sales location could be considered the customer's delivery address.

Sales location is important because it can affect sales tax collection, which is often based on the location where the customer receives the merchandise or service. It's also used for reporting purposes and can help businesses understand their market reach and customer demographics.

Visit Clinic website provides the ability to add sales locations so that it is easy for product seekers to access the address and know the companys data announced on the site. The site also provides the feature of adding the shipping address of the factory.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=ori88_UxAjQ

8.7.8 Files and Links

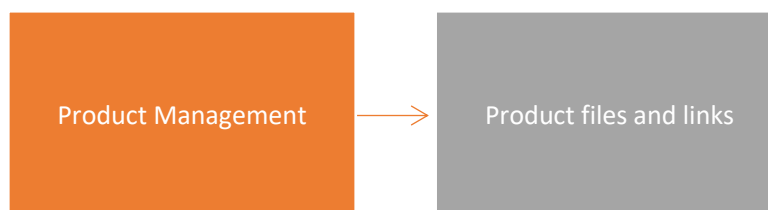

Product files and links typically refer to the digital assets associated with a product in an e-commerce context.

- Product Files: These can include various types of digital content that provide more information about the product. Examples of product files are user manuals, technical specifications, warranty information, assembly instructions, etc. These files are usually provided in a downloadable format such as PDF or DOC.
- Product Links: These are hyperlinks that lead to additional resources related to the product. This could be a link to the manufacturer's website, a product demonstration video, customer reviews, or other related products.

These files and links are typically found on the product detail page and are meant to assist customers in making informed purchase decisions. They provide additional information that may not be included in the product description or specifications.

Visit Clinic website provides the ability to provides the advantage of uploading files to the website such as an image or a writing / text file. Uploading files also provides the possibility of adding a video link from YouTube so that the information seeker can view the video through YouTube.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=IhO6yP4tQY0

8.7.9 Factory Locations

Product factory location, also known as facility location or plant location, refers to the choice of region and the selection of a particular site for setting up a plant. The right facility location will have sufficient access to the customers, workers, transportation, etc.

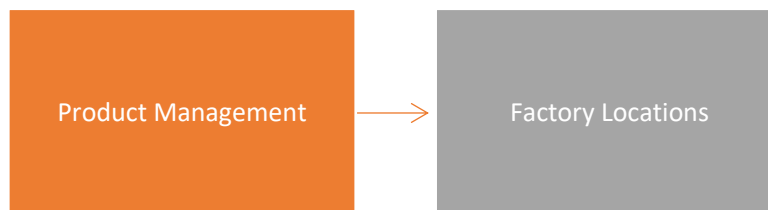

The location of the business is the most important factor influencing its success or failure. It is a long-term decision that should take into consideration not only the present requirements of the organization but also its future expansion plans⁴. Choosing an inappropriate factory location may be very difficult and expensive to rectify.

Some of the key factors that influence facility location are the following:

- Proximity to customers, suppliers, and skilled labor
- Environmental regulations
- Financial incentives offered by state and local development authorities
- Quality-of-life considerations
- Potential for future expansion

The location of a plant has a bearing on the layout of machinery and equipment as well as on the process of production. There is no ideal location for all firms or even for one firm at all times. The choice of location depends on several important factors. It is influenced by the kind of products being manufactured and the costs of production and distribution.

Visit Clinic website provides the ability to add branches of factory sites so that it is easy for factory seekers to access the address and know the company data announced on the site. The site also provides the advantage of uploading files to the website such as an image or a writing / text file. Uploading files also provides the possibility of adding a video link from YouTube so that the information seeker can view the video through YouTube.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=IhO6yP4tQY0

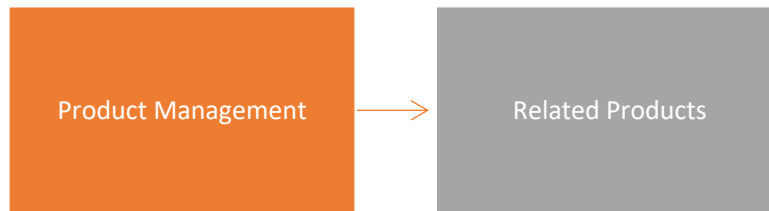

8.7.10 Related Products

Related products are products that are influenced by a price change of another product, are recommendations in addition to an item a customer is currently viewing, are meant to help in the usage of the main product, supplement each other, increase enjoyment from the product, smooth over its shortcomings; they are its replacement parts, etc. They can also be variations of the main product, such as different colors, sizes, or editions. Related products are relevant to the customers and usually from the same category or subcategories of the currently viewed product.

A related product could be an accessory, cross-sell, substitute, or up-sell. For example, for a Microsoft Surface Pro product, you can add Microsoft Surface Book as an up-sell product so that when your sales agent is adding Microsoft Surface Pro to any opportunity, quote, order, or invoice, Microsoft Surface is suggested as the up-sell option⁴. The related products are displayed as suggestions to your sales agents during opportunity or order management. These suggestions help your sales agents recommend related products and bundles/kits to the customers, and increase product sales.

Visit Clinic provides the possibility of adding other products on the site that are manufactured by the factory or from another factory.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=GyxgL5O5sy4

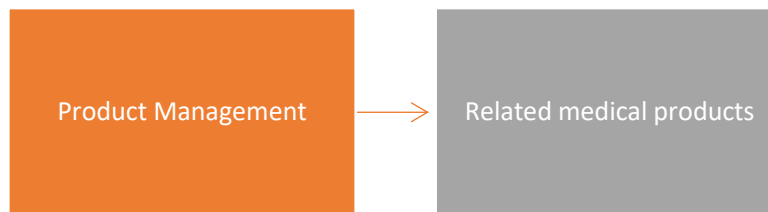

8.7.11 Related Medical Product

Related medical products can be classified into several categories:

- Health-related products: Any products other than prescription items that, according to the manufacturer or distributor, benefit health.
- Medical products: All regulated substances, chemicals, compounds, drugs, blood, tissue, organs, serums, organisms or part thereof (including genetic materials), viruses, waste and other materials related thereto and used in connection with medical treatment, laboratory analysis, production or analysis of drugs, or other biomedical research.

Visit Clinic provides the possibility of adding related medical products on the site that are manufactured by another factory.

English	https://www.youtube.com/watch?v=GyxgL5O5sy4

8.7.12 Product Images

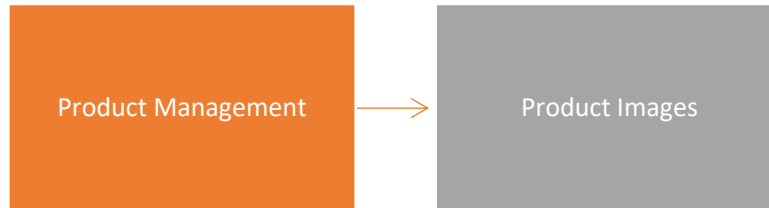

Product images are visual representations of a product that showcase its features, design, and functionality. They are used on e-commerce websites and online marketplaces to help customers make informed purchasing decisions. Product images can also refer to the perceptions and mental image associated with a product, signifying what the product currently stands for.

In the context of product photography, product images are any images of goods for sale. Also known as commercial photography, these images are meant to entice shoppers to purchase the

photographed products. They feature product details and features, supplemental to written copy and product descriptions. The idea is to give potential buyers a full impression of the product.

Visit Clinic website provides the ability to provides the feature of adding images of the product so that the product finder can see the images.

8.7.15 Product News

Product news refers to the latest information or updates about a product. This could include announcements about new features, updates to existing features, changes in pricing, or the launch of a new product. Product news is often shared through press releases, blog posts, social media updates, and newsletters. It's a way for companies to keep their customers informed about their products and to generate excitement about new developments .

Visit Clinic provides the ability to add news about the product, such as selling the product with a customer or other topics related to the product.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=L5RJYutDfAY

8.7.16 Product customer list

Customers List is essentially a list of a company's current or previous buyers, which is created based on a set of criteria. This list can include information such as the customers names, contact information, demographic data, order history, and more.

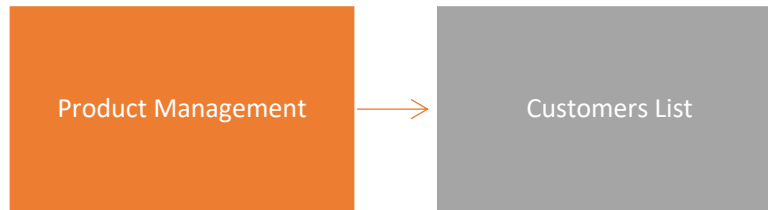

The criteria for building a customer list can vary depending on the company's needs. For example, it could be based on customers who made a purchase during a specific period, or it could be based on demographic data.

Customer lists are valuable assets for businesses as they provide insights into customer behaviors and preferences. They can be used for various purposes, including:

- Obtaining leads: If a client has purchased from the business before and was satisfied with the products and services, they are likely to do so again.
- Customer service: Customer lists can help gather feedback and valuable insights from clients, which can be used to improve service, enhance customer experiences, boost conversion rates, and generate more profit.
- Maintaining relationships: Having customer data categorized and ready for use helps deliver better, more personalized interactions, which can increase customer satisfaction, build trust, and maintain relationships with clients.
- Marketing: The data stored in customer lists are invaluable in developing successful marketing strategies. From customers' past purchases to their preferences and buying behaviors, this information allows marketers to deliver effective targeted marketing campaigns.

Visit Clinic provides the ability to add customers to the medical factory product.

8.7.17 Product success stories

The success story of the product expresses the journey that the product goes through from the beginning of its development until it reaches the market and the success it achieves. This journey includes several steps starting from product idea, planning, design, development, production, marketing, and finally selling.

Product success stories reflect how businesses have been able to achieve success by offering products that meet customer needs and expectations. These stories may include the challenges the company faced during product development and how it overcame those challenges. Sometimes, success stories may also include how companies or individuals have been able to turn a simple idea into a successful product that is widely used. These stories may be a source of inspiration for people who want to develop new products .

Visit Clinic provides the ability to add a success story selling the product to a customer and the screen consists of information about the success story and the addition of employees from the customers company and his role in the project.

Language	Youtube Link
English	https://www.youtube.com/watch?v=xw5-Jm1f8zA

8.7.20 Product Categories

A product category is a way for businesses to group and organize products or services they sell.

When products are categorized, it is easier for customers to find what they're looking for on a website and employees to quickly refer to and find a product. Categories tend to be organized in a hierarchy tree structure since many products will overlap between categories .

Products can be categorized in various ways, from product type and features to customer needs. Many brands will include these multiple categories on their website so you can look for a general product type or search specifically for a feature or use case.

Product categories help your promotion efforts. You can better promote connected products when you group similar products into categories. This helps customers find multiple products that complement each other — potentially increasing sales for multiple products. If your products are easy to find, the right customers will see them. If your customers can't find what they're looking for, they're more likely to spend their money elsewhere. But if your product categories are clear, concise, and well organized, customers are more likely to find what they want — leading to higher conversion rates.

Visit Clinic website provides the ability to add classifications to each product, and the classifications are divided into two main types, the first is the first division and is concerned with the main classification, while the second is concerned with the sub-classification. Information on the first and second classifications can be added in a separate screen so that the user can see the classifications of the medicinal product.

The benefit of classifications is that the classification gives a shape that indicates the product for example

- The main classification, for example, gives an illustration on the technical division
- Subclassification gives clarification on part in the technical division
- Descriptive classification

Main classification

- Add product key classification information

Subcategory

- Add product sub-classification information

Descriptive classification

- Add product meta information

8.7.21 Product comparisons and ratings

Product feature comparison is the practice of comparing and contrasting the features and design

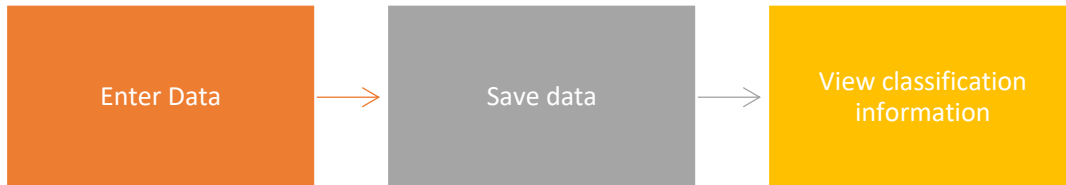

of multiple products. It is performed across many industries by consumers and businesses. A product comparison is a simpler version of competitor analysis. It explains the two products' features individually, citing their benefits and relevance to a specific customer. Comparing two products will also cite the better option, backed with evidence and functionalities

presented on a page or table.

A product feature analysis compares the main features of a product or service across the competitor landscape. This kind of analysis reveals the strengths and weaknesses of each product as well as opportunities for new feature development.

Competitive Feature Comparison Matrix is a tool to compare the features and functionality of competitive products or services in side-by-side table. The feature comparison matrices are used for feature comparison analysis of competitive products and services.

Visit Clinic website provides the possibility of adding a product classification, as it can contain, as we mentioned before, a main classification, a sub-classification, and a title for classification, and each title for classifications can contain ten information that can appear in the product classification data .

9.1 Add a new department/department

A department in a company refers to a specialized unit or branch within a company that undertakes a certain set of tasks. Companies usually consist of several divisions that work together to achieve the company's goals. Here are some examples of the main departments in companies:

- Human Resources Department: It is the department responsible for managing personnel affairs from recruiting, training, developing and evaluating employees.
- Information Technology Department: It is the department responsible for managing systems and electronic services.
- Department of Warehouse Management and Product Supply: It is the department responsible for providing the product to the consumer.
- Production Department: It is the department responsible for the process of monitoring, planning and scheduling the production process of products.
- Accounting and Financial Management Department: It is the department responsible for organizing and managing all material transactions of the company.
- Marketing and Sales Department: It is the department responsible for developing and achieving research and marketing plans.
- Quality Department: It is the department that is responsible for ensuring that the products meet the specified standards and standards.
- Occupational Safety and Health Department: It is the department responsible for protecting individuals working in the company from any risks they may face at work.

Visit Clinic website provides the ability to add management to the medical entity in order to add employees to the administration, contracts, or follow-up management.

9.2 Employment

Recruitment is a process that involves a set of activities that organizations use to attract qualified candidates to work. This process involves searching for candidates who are competent, distinguished and able to contribute to the achievement of the organization's goals.

There are different sources of HR attraction, which can be categorized into internal and external sources. Internal sources refer to the use of human resources available within the organization, which meet the conditions and requirements of the job. Some of the ways this can be achieved include promotion, job transfer, internal advertising, acquaintances and friends .

Visit Clinic helps the medical organization to deploy, track and manage careers. The portal provides the following features:

- Publish a new job: The site will provide basic job information such as job title, description, classification and more
- Edit the published post
- Users registered on the site can search and apply for published jobs
- HR applicants: It is an area designed to help the HR manager manage applicants for employment, schedule an interview or recruitment, and there are a lot of details on this screen to help the HR manager manage the medical company

9.3 Attendance and leave "fingerprint"

The attendance system is a system used by many institutions and companies to track the attendance and leave time of employees. This system helps in controlling employees working hours and following up their commitment to work schedules.

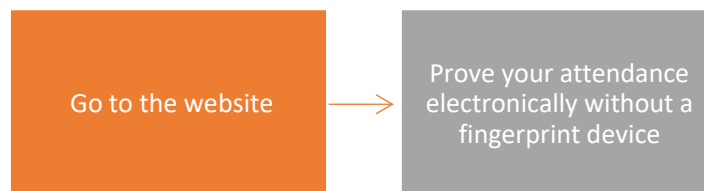

The main objectives of the attendance system include:

- Increase productivity: The greater the discipline, the greater the productivity expected of employees.
- Improving the flow of work: Controlling attendance and departure helps in enhancing the flow and speed of work in companies.
- Achieving accuracy in the salary process: One of the most important factors affecting the salary flow is attendance and departure.
- Reduce cost: Controlling attendance and departure helps to know the actual need for overtime hours, or at least reduce them as much as possible.
- Achieving discipline: One of the most important values that affect the work environment in general is the principle of commitment to discipline.

Therefore, the attendance management system is one of the most important issues that the human resources department works on mainly.

Visit Clinic website helps medical authorities to add proof of employee attendance through the website instead of the fingerprint device, which provides the possibility of quick attendance without effort and without the costs of purchasing fingerprint devices.

9.4 Fiscal year, accounting tree and ledger account

The chart of accounts, also called a chart of accounts, is an essential tool in the accounting system of any company or organization. It consists of a set of financial accounts arranged in a logical and sequential manner. Includes primary accounts, subaccounts, and secondary accounts. Each account represents a certain component of the financial structure of the company. The main objective of the chart of accounts is to organize financial accounts in such a way as to facilitate the process of tracking and analyzing financial and accounting operations. Used to document all financial transactions under a specific item .

The chart of accounts is an organizational chart that makes it easy to refer to and locate any account among other accounts. The numbering system usually starts with the accounts of the financial position and then the accounts of the income statement. The benefit of the chart of accounts lies in ensuring that the procedures of financial statements are organized, whether using accounting software or by recording manually. The chart of accounts is the best way to ensure this regulation .

Visit Clinic website helps medical authorities in adding the fiscal year and printing accounting tree information for a specific period for creditor and debtor accounts, and also can print ledger account information for a specific period of time.

9.5 Exchange and purchase order invoices

A purchase order invoice is a commercial document issued after the purchase order is executed.

The invoice includes details such as types of products or services, quantities, and agreed prices. After the buyer places an order, a purchase order is created, while an invoice is created when the order is executed .

A disbursement order is a request from the concerned authority or department addressed to the fund or treasury to execute the disbursement by handing over the amount to the receivable. It is used in the public and government sectors, where disbursement orders are issued to companies contracting their projects electronically to complete the disbursement cycle for beneficiaries.

Visit Clinic provides financial services in terms of issuing "outgoing" purchase order invoices and "incoming" supply order invoices to the medical authority. The site offers an investigation into the financial process in terms of amendments. All transactions affected on the professor's account.

Exchange order invoices

9.9 Suggestions and Complaints Management

Suggestions and complaints management is the process that deals with customer complaints and suggestions in a company. The goal of this department is to enhance customer loyalty and quality assurance. Criticism is evaluated in a systematic and structured manner and used to make a positive impact.

Management involves developing strategies and determining where to receive complaints and suggestions, how to respond to them and to which departments or individuals the information obtained should be sent. Assigning responsibilities is also part of complaint management. Only when it is clear who should react in each case can negative criticism be turned into something positive.

Visit Clinic provides the ability to add a service improvement request or customer service report through the website. Customer service report after addition enables the employee of the medical institution to transfer the report between employees in order to follow up the report.

10. Laboratory

A medical analysis laboratory, also known as a clinical laboratory, is a place where

biotechnologies and devices are used to analyze a variety of patients biological samples, such as urine, blood, tissue and other samples. These medical analyzes are used to collect additional information about the patient along with medical history and clinical examination .

There are a large number of types of medical tests, which are used in different medical fields such as assessing the health status of the individual, diagnosing many diseases and health problems, detecting genetic diseases, and identifying the efficiency of the work of the bodys organs such as the kidneys and liver.

Examples of types of medical tests include: Examples of types of medical tests include:

- Complete blood count (CBC) analysis
- Urine test
- Stool examination
- Blood sugar test
- Cholesterol and fat test.

10.1 Add a configuration for a new test

Medical tests are tools used to collect additional information about the patient along with a medical history and clinical examination. These medical tests can confirm the diagnosis of the disease or give us more medical information about the patient's condition and response to treatment.

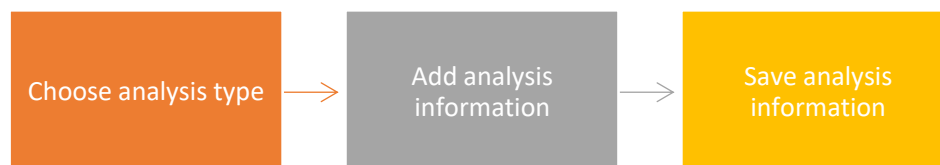

Medical examinations are carried out in the form of:

- Comprehensive medical tests: performed by healthy people to check on their health condition periodically.
- Search for preliminary diagnosis: Conducting laboratory tests of blood and others to identify the organ or system that has begun to lose its functions in the body and confirm the initial diagnosis.
- Differential diagnosis: contributes significantly to the weighting of the most applicable diagnosis to the patient's condition and thus provides the correct treatment.
- Evaluation of medical condition and treatment outcomes: Many medical tests are used to monitor the patient's condition, the effect of the drug, the progression of the disease and the results of recovery.
- Assess the severity of the disease: The importance of some laboratory tests while the patient is in the hospital, in order to assess the severity of the disease and detect complications early.
- Early detection of chronic diseases: Some medical tests are important for the early detection of cancer and some chronic diseases.

The most important types of medical tests include:

- Blood picture analysis or (general blood count): measures the number and percentage of blood cells of all types, in addition to inflammatory indicators.
- Urine test: It measures some substances in the urine, such as: glucose, protein, bilirubin, and blood cells.
- Stool test: used in the diagnosis of some cases of allergies of the body.
- Blood chemistry tests: such as blood sugar test, cholesterol test, hormone test.

Visit Clinic website helps labs add new tests such as fat percentage or other tests. The analysis has a set of information such as age, gender, man, princes, child and other information important for analysis. After adding the analysis, the lab can search for the type of analysis and record a new analysis.

10.2 Request a patient analysis from the receptionist

Visit Clinic helps the receptionist in the laboratory to receive patients in order to add a new analysis request. The receptionist searches for the patient through his mobile phone number and if he is not registered, he can be registered easily and quickly. The receptionist chooses the name of the analysis, adds the analysis and prints the order invoice. After adding the request, the request is directed to one of the specialists in the laboratory in order to start the analysis procedures for the patient. The patients file can be transferred from one specialist to another. After completing the addition of the analysis data by the specialist, the receptionist can print the result of the analysis.

Add a patient analysis request

- Add a patient analysis request
- Print the required analysis invoice

Laboratory Specialists

English	https://www.youtube.com/watch?v=ZNcHA_ZExuY

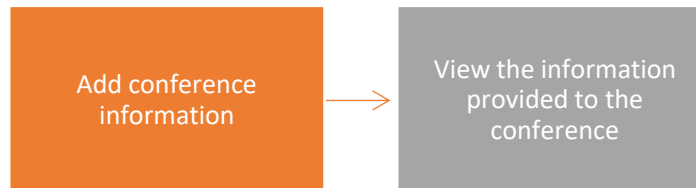

11. Conferences

A conference is a cultural gathering under a specific theme or theme to which specialists in a field are invited and present research and working papers that address a conference issue. The conference is usually organized by an educational institution such as universities or research centers. The conference extends for days during which research and working papers are discussed. The conference event will then conclude with the reading of the final recommendations, which are the results reached by the conferees through their research and working papers presented during it.

11.1 Add a new conference

Visit Clinic helps pharmacies, clinics, medical services offices, and pharmaceutical companies add a seminar, conference, or medical event that can be published to everyone on the Internet in order to spread medical awareness or disseminate information about the symposium or conference. The conference provides the following advantages.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=-11Qi6Kbv7U

11.2 Adding a hotel to the conference

A hotel is a place where people go for short-term stays for a fee. Hotels are furnished and provided with all services, amenities and entertainment. Hotels are defined as those facilities that provide places to live and sleep for people in general, and visitors in particular, in addition to many other services, such as restaurants, gyms, meeting rooms, and others .

The idea of establishing hotels is one of the old ideas, which appeared before Christ, where hotels were initially small and modest housing, prepared by their owners for the accommodation of travelers. As for the types of hotels, they include resorts that offer all the amenities and self-entertainment for their guests. There are also commercial hotels that provide convenience for those who make short trips. In addition, there are residential hotels that are similar to these residential buildings that contain multiple apartments.

Visit Clinic offers the possibility to add a hotel to the seminar/conference in order to introduce participants to the venue of the event. Visit Clinic offers nearly 200,000 hotels worldwide.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=F_r5bB7tm24

11.3 Speakers

A conference speaker is a person or persons who present research or working papers that address a conference issue. In the case of press conferences, a speaker is a person or persons who have news of interest to the public and want to disseminate it. Questions are usually asked to speakers by journalists, and this provides an opportunity to ask questions to speakers and clarify data.

Visit Clinic helps medical authorities add a conference or event to introduce a medical product or seminar. For each conference or symposia, there are speakers who have speaking times at the conference. The site helps conference seekers to see a list of speakers and know their data and the times they will speak.

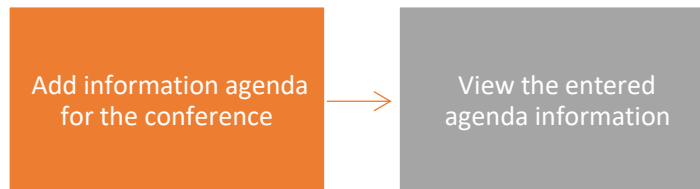

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=cW_hqOF9V54

11.4 Agenda

The conference agenda is the backbone of the events content. It includes organizing sessions, scheduling times, and serving food to participants. Visit Clinic provides the possibility of adding an agenda to the event in order to inform everyone about the times of the events.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=-WiNmZ3zqPU

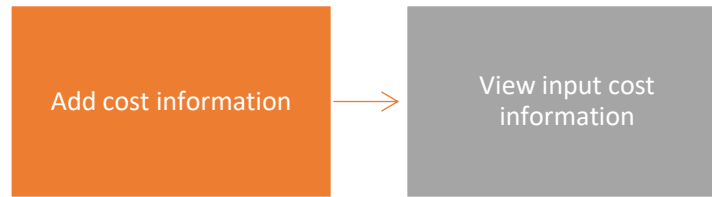

11.5 Costs

Conference costs depend on many factors, including venue, speakers, staff, insurance, marketing, beverages, food and more. There are two types of expenses: variable expenses that depend on the number of participants, and fixed expenses such as location. In addition, there may be government taxes that contribute to a large portion of the expenses.

Income should be calculated based on all potential sources of income such as registration and advertising sponsorship. Some conferences may be funded and cover travel and participation costs or part thereof, while others may not. In this case, the participant must pay the full costs.

Adding costs for the event/seminar/conference at Visit Clinic helps the medical entity in adding financial costs.

External links form youtube website

Language	Youtube Link
English	https://www.youtube.com/watch?v=t1J8aI7a3YA

11.6 Exhibitors

Conference exhibitors are individuals or companies that provide products, services or information relevant to the conference topic. Exhibitors set up their own pavilion or space at the conference where they can showcase their products or services and interact with attendees. The aim of the presentation at the conference is to raise awareness and promote products or services and establish business relationships.

Visit Clinic website helps medical authorities in adding exhibitors to the event, where it is possible to add the place and area of the place, the name of the exhibiting company, the phone of the exhibitor, the phone of the official, the accounting tree for the place of the exhibiting company, and the cost of the place for the exhibiting company, and the value of the rental can be found on the xe.com website immediately after choosing the currency.

12. Project Management

Project management is a discipline related to the organization and management of resources, such as human resources, in such a way that a project can be completed respecting its specific content and taking into account quality, timeliness and cost factors.

A project is a time-bound process or activity, i.e., it has a start date and an end date, done once in order to deliver a product or service with the aim of achieving beneficial change or creating added value .

There is a difference between a project being a one-time temporary order, and administrative or operational processes that take place permanently or semi-permanently in order to provide the same product or service over and over again .

The objectives of general project management are to increase productivity, reduce costs, reduce expenses, finish the project on time, complete the project according to the planned budget, and implement all requirements such as quality assurance.

12.1 Add a new project

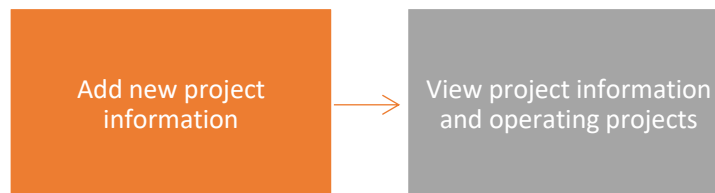

A project is defined as the work of an individual to implement a certain idea, whether it is a product or a service. To implement this idea, the project uses some key resources, such as financial, knowledge, and staff. The project also provides a service, that is, it solves a societal problem, and this is in exchange for something material.

In general, a project can be defined as a time-bound process or activity, performed once in order to deliver a particular product or service with the aim of achieving beneficial change or adding value.

Projects differ in nature, including political, economic, commercial, sports, cultural, industrial, agricultural and others. Projects are divided in terms of return and economic profit into for-profit and non-profit projects .

Visit Clinic provides a project management module to support medical authorities by adding a project to the medical authority or an operation project in order to follow up with all employees. The project management module provides the following:

12.2 stakeholder

Stakeholders are the persons, groups or institutions that the proposed intervention is expected to affect (either negatively or positively), or those who can influence the outcome of the intervention. Concerned people analysis involves identifying and analyzing the people involved and planning to involve them in decision-making. Visit Clinic provides the possibility of adding stakeholders to the project in order

to work on collaborating with them during the project. The site provides the following features for those concerned:

12.4 Project Activities Management

Activities in the project are the main works that must be done to achieve the objectives of the project. These are some examples of the main activities:

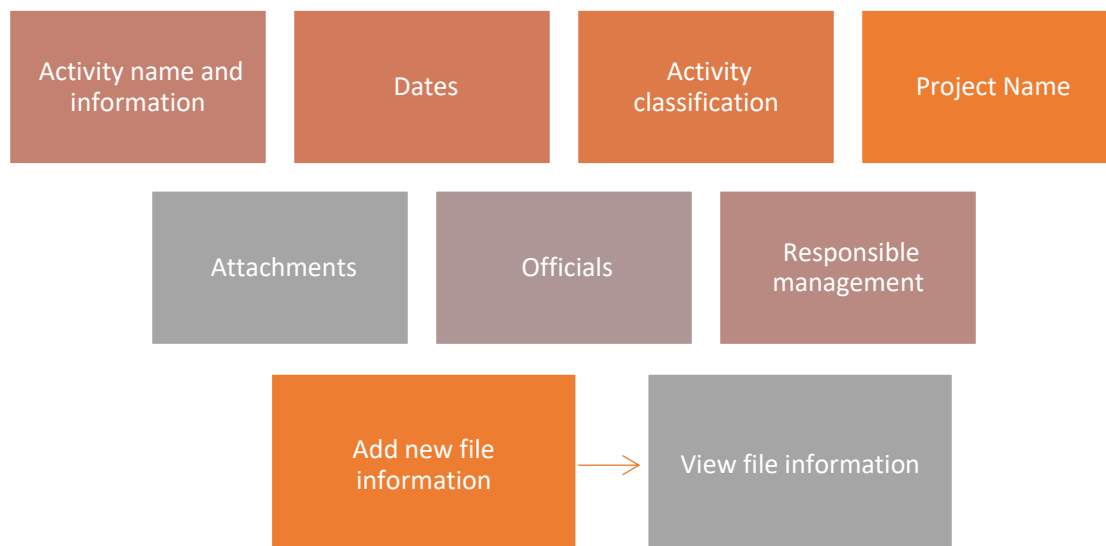

- Production: design, manufacture and supply of a product in bulk or high-quality quality.
- Problem solving: Finding new solutions to customer problems.
- Platform/Network/Marketplace: Activities here relate to the construction and management of the network, platform or marketplace.

In addition, the project can include other activities such as marketing, sales, customer service, community management (forums and social services), finance, product development and maintenance, network development and maintenance, market or platform development and maintenance, quality management, distribution, shipping, data management and protection, product design, research and development, brand preservation, procurement, project management, consulting, business development, partnership management, protection, logistics network management, store management, inventory management, manufacturing, event management.

At each stage of the project, these activities must be thoroughly defined and planned to ensure that the project runs smoothly.

Visit Clinic website provides the ability to add activities to a project belonging to the medical service in order to follow up the project according to the name of each activity. The site provides the following information:

12.5 Estimate the time and cost for each activity

Project costs refer to the process in which the costs of a particular project are estimated, allocated, and controlled. This process allows companies to identify and anticipate future expenses in order to ensure that they do not exceed the companys budget. The expected costs are calculated during the planning phase of the project and must be approved before the start of work on the project .

During project execution, expenses are documented and tracked so that all processes go within the cost management plan. Once the project is completed, the projected costs are compared with the actual costs, providing specific parameters for future cost management plans and budgets for upcoming projects.

There are several ways to estimate the cost of a project, including similar estimate, progressive estimate, parametric estimate, and Delphi cost estimate. Each method has its own advantages and disadvantages, and experts in the field of project management use these methods based on the nature of the project and the goals to be achieved .

12.6 Risk Management

Project risk management is an important and essential process for the success of any project.

Risk management is defined according to Bahamid et al, 2017 as "a structured and comprehensive method designed to organize, identify, and respond to risk factors in order to achieve project objectives ".

Project risk management involves several key steps:

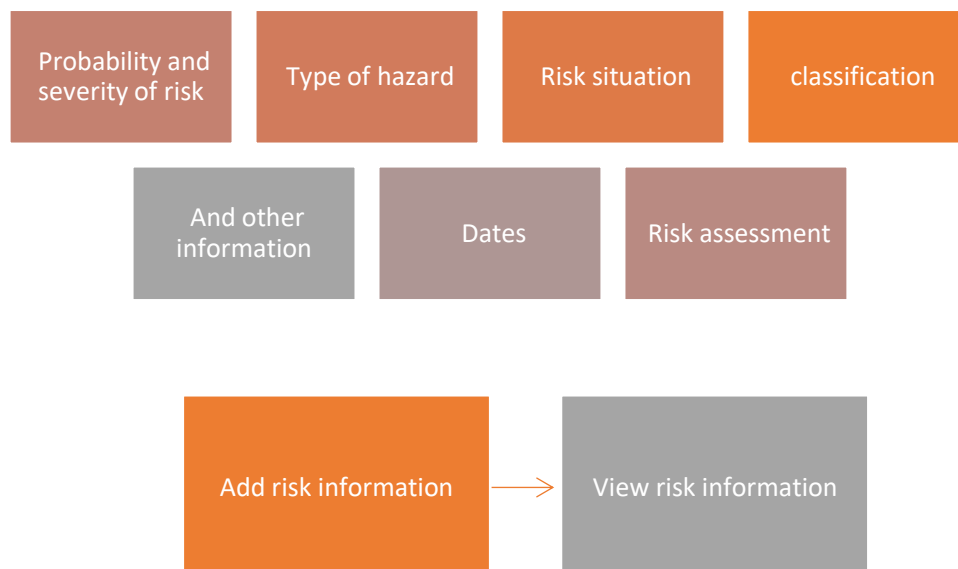

- Risk identification: The project team has to identify potential threats that may affect the project.
- Risk analysis: Once the risks are identified, they must be analyzed to understand the potential impact of each risk.
- Risk planning: A plan should be developed to deal with each risk if it occurs.
- Monitoring and control: Risks should be monitored throughout the project life and action taken if any occurs.

Types of risk in projects include:

- Financial risk: arising when costs exceed the budget value.
- Legal risks: arising from breach of legal obligations.
- Operational risks: arising when problems occur in the purchasing, selling and distribution processes.
- Strategic risks: which may be the cause of the failure of the project, especially if it is long-term.

Risk management in projects is an ongoing process and is necessary to ensure the success of the project.

Visit Clinic provides the ability to add anticipation of a risk to the project The site provides the basic features of risk management such as:

12.7 Employee Evaluation

Employee appraisal is the process of evaluating the performance of employees and determining their effectiveness at work. Measuring employee performance is an essential tool to assess their success and encourage their development. Visit Clinic website provides the possibility of evaluating the staff/participants of the project, the evaluation is carried out on five levels:

12.8 Project indicators board

A project dashboard is a tool that helps track and monitor project performance. It includes many features that help in understanding the overall performance of the project and providing an overview of the various activities associated with the project. Visit Clinic website displays a dashboard of the project and general information about the project in order to give a general perspective of the project in order to make a decision or send the report to the responsible managers in the entity.

The report provides the following:

- Dashboard (types of risks, risk status, project supporters, general statistical information)
- Project activities
- Project risks

12.9 Gant Chart Dashboard

A Gantt chart is a visual representation of tasks or activities displayed over time. The concept of the Gantt chart dates back to the last century in 1910, named after the mechanical engineer invented by Henry Gant. It is a graph of project management by defining its activities and tasks according to a time frame allocated to each task separately.

The basic parts of the Gantt chart include:

- To-do list: Each task in your project gets its own row on the graph.
- Timeline: The chart has a horizontal axis that defines time periods - usually days, weeks, or months.

- Start and end dates: A bar appears for each task when it starts and ends along the timeline.
- Dependencies: Connections show whether one task must be completed before another begins.

Visit Clinic website helps the project manager at the medical authority to view the report of the Gantchart dashboard in order to know the activities in the project and their conditions

Yellow: There is a slight delay

Green: On schedule

Red: Late

13. Computer Store

A computer store is a place where you can buy computers and related products. According to The Free Dictionary¹, a computer store is “a store that sells computers to the small businessperson or personal user”. You can also find computer stores online, where you can browse and order products from the comfort of your home. Some examples of online computer stores are Amazon, Newegg, and Best Buy.

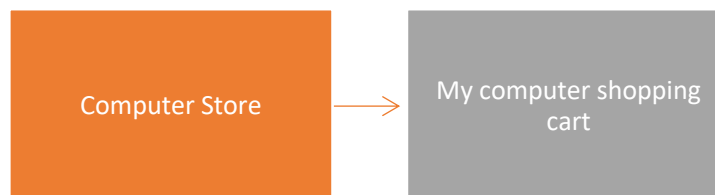

13.1 Manufacturing Company

A computer hardware manufacturing company is a type of business that produces and assembles computer components, such as desktops, laptops, servers, storage devices, and peripherals. These companies use various processes, tools, machines, and labor to transform raw materials or parts into finished products that can be sold to customers or other businesses. Some examples of computer hardware manufacturing companies are Lenovo, Dell, HP, and Asus.

13.2 My Cart

An online computer shopping cart is a feature that allows customers to select and buy products from visit clinic e-commerce website. It works by storing the products that the customer adds to their cart, showing the total price and quantity, and collecting the customer's payment and shipping information. An online computer shopping cart makes it easier and faster for customers to shop online and for sellers to process orders and payments.

13.3 Add Hardware to the SYSTEM

Adding computer product to the website system is a process of creating and displaying information about a computer product on an e-commerce website. It involves using a visit clinic provided services or an add-on to upload and edit the product details, such as name, price, description, image, specifications, etc. It also requires setting up the online shopping cart and payment options for the product. By adding computer product to the website system, the seller can showcase their product to potential customers and enable them to purchase it online. The newly added product will be accessible to other online users as long as you choose to publish and make the product public.

13.4 My SYSTEM Hardware list

My account website hardware list is a list of hardware devices that are associated with my account on a website.

13.5 Add Hardware to my COMPANY

Adding hardware product to your company website account is a process of creating and displaying information about a hardware product that your company sells or offers on visit clinic website.

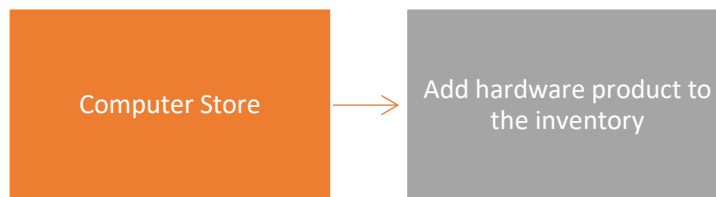

13.6 My COMPANY Hardware List

My COMPANY account hardware list is a list of hardware devices that are associated with my company's account on a visit clinic website. My COMPANY account hardware list is a list of hardware products that are available or purchased on a visit clinic website. For example, if my company sells computer hardware on an online marketplace, it can see and add products to its shopping cart or inventory on the marketplace's website.

13.7 Add hardware product to the inventory

Adding hardware product to the inventory at website is a process of updating the quantity and availability of a hardware product that is sold or offered on visit clinic website. It involves using add-on to enter and modify the product details, such as stock level, etc.

13.8 My hardware product inventory transactions

The process of tracking for the goods that a business sell. Inventory transactions are the records of the changes in the quantity and value of the inventory items.

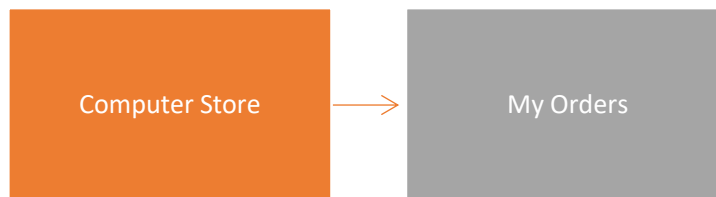

13.9 New Order

Order a new product from a visit clinic that sells computer hardware. A new order is a request or instruction from a customer to purchase a specific product. A new order usually contains information such as search for product and display for the required information and dealers from the website

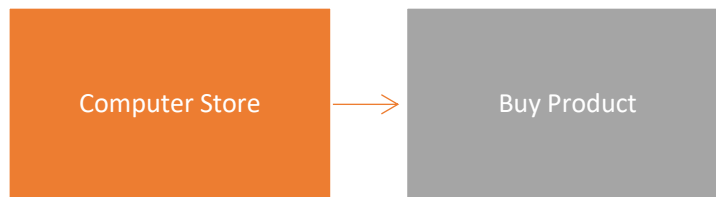

13.10 My Orders

My Orders is a feature that allows you to view your orders that you have placed on a visit clinic website.

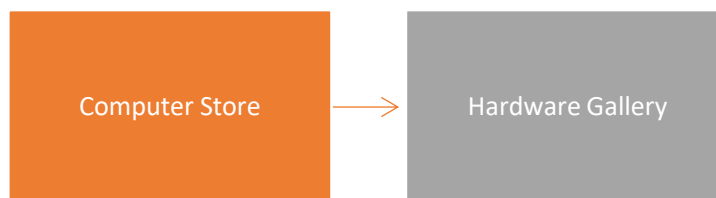

13.11 Buy Product

Buying computer products from a website is the process of purchasing hardware, software, or accessories for your computer through visit clinic website. You can browse different products.

13.12 Hardware Gallery

Hardware Gallery is a term that refers to a visit clinic website that showcases various types of computer hardware products.
