ABOUT Modern Systems for Software Development

Modern Systems for Software Development is a dedicated software firm focused on delivering top-tier software development, analysis, and implementation services, adhering to global standards. The firm aims to set industry benchmarks through international best practices, offering cutting-edge solutions for complex client needs. Notably, they have developed a healthcare software platform that streamlines services for medical professionals and pharmacies, serving as a vital tool for medical sales representatives and the general public.

Beyond healthcare solutions, Modern Systems for Software Development provides comprehensive software analysis and business process consulting services using frameworks like ITIL and CMMI. The firm's founder, with a track record of success in notable entities, emphasizes human resource development and collaboration, authoring valuable resources for the global software engineering community. Their commitment to custom software development ensures that client needs are met with professional, tailored solutions available online or through internal networks.

Integrations

Human Resources

- The Visit Clinic Portal meets the essential needs of any organization by providing comprehensive human resources solutions.
- The portal offers a complete overview of the services provided by the organization and ensures that human resources operate in a conducive environment to achieve the organization's goals.
- The HR module, being the central component, addresses all organizational requirements and integrates seamlessly with other modules to manage daily activities efficiently.

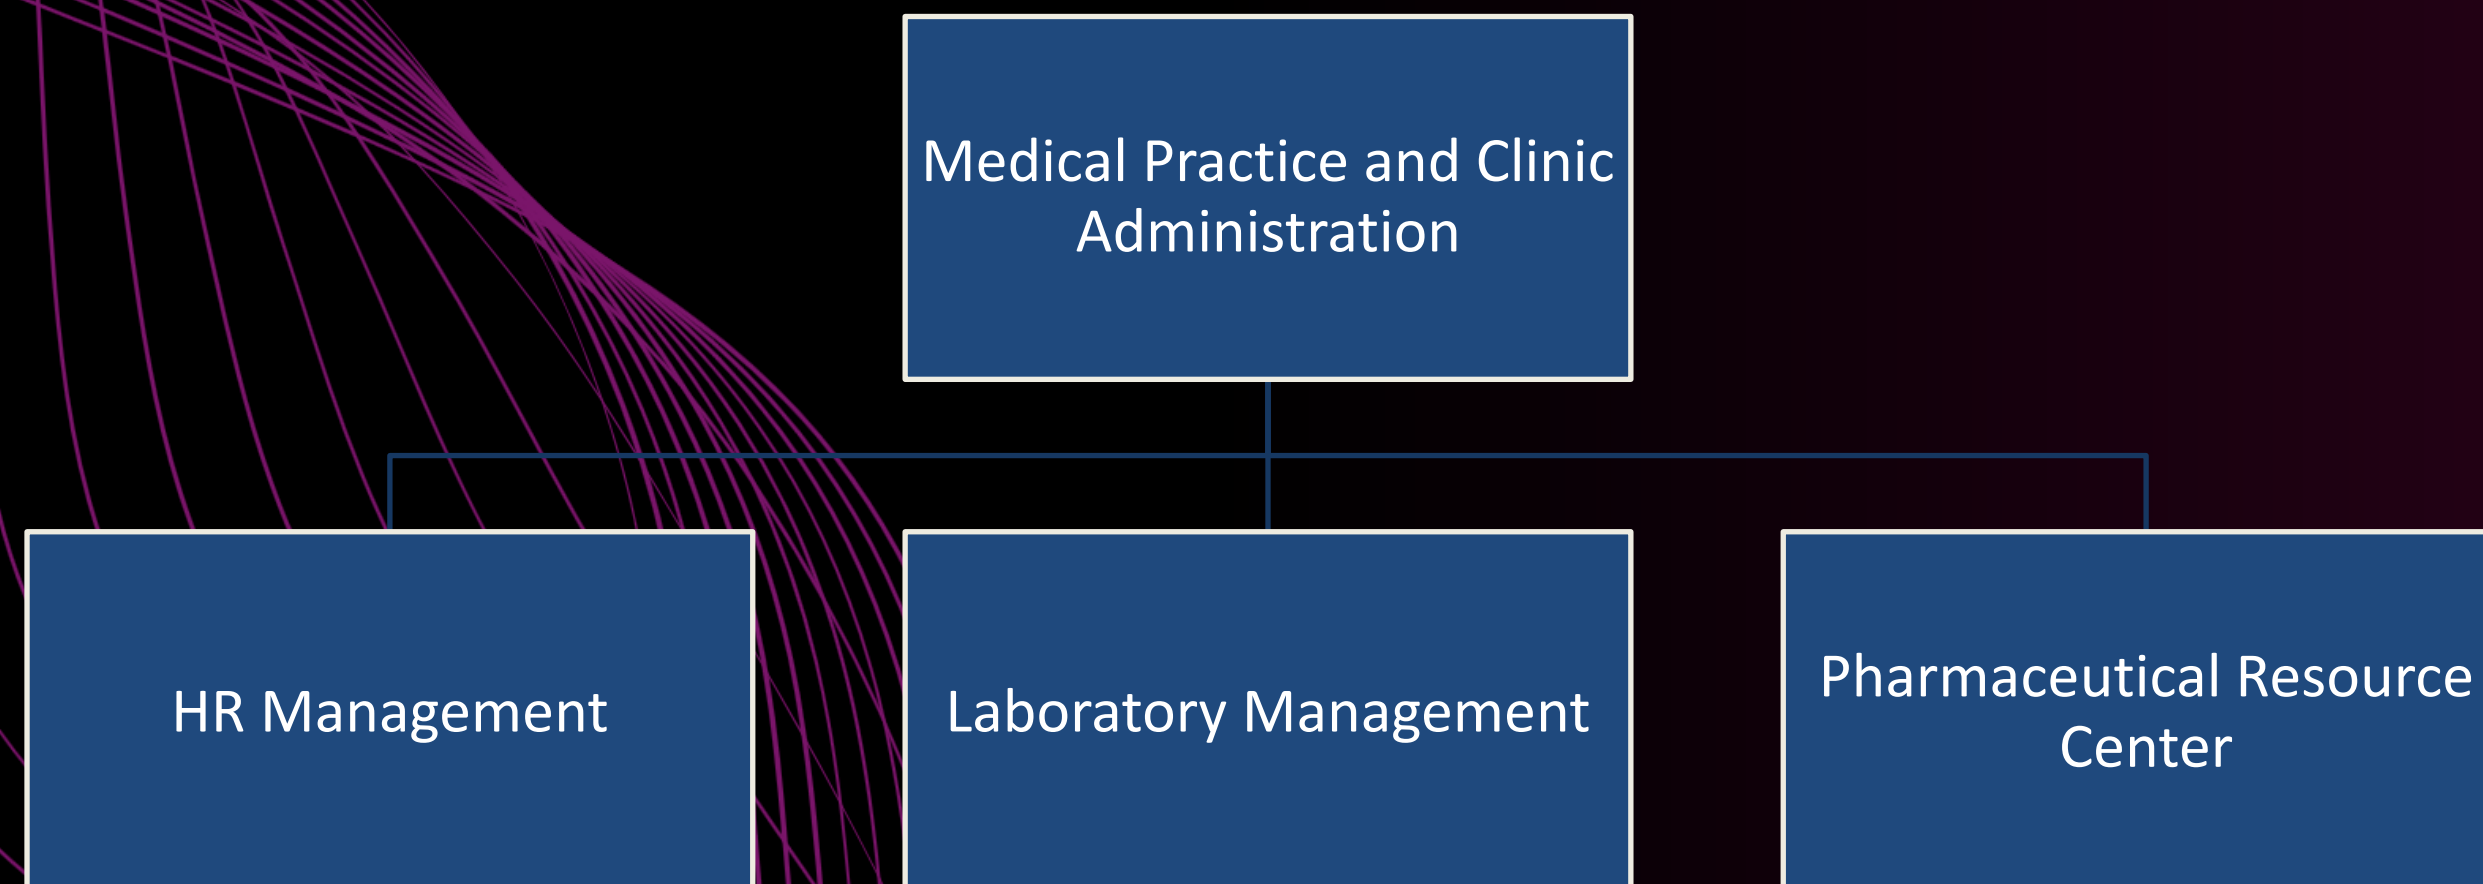

VISIT CLINIC

The Pulse of Medical Management

Integrations

Medical Practice and Clinic Administration

The Medical Practice and Clinic Administration module is essential for managing the clinic, its employees, and patients. This module provides a comprehensive 360-degree view of the clinic's operations.

Integrations

Pharmacy Management

Pharmacy Management serves as the primary tool for pharmacists, offering essential functionality to operate the pharmacy. This system can be accessed through an online gateway, synchronized with the portal, or used as a standalone edition.

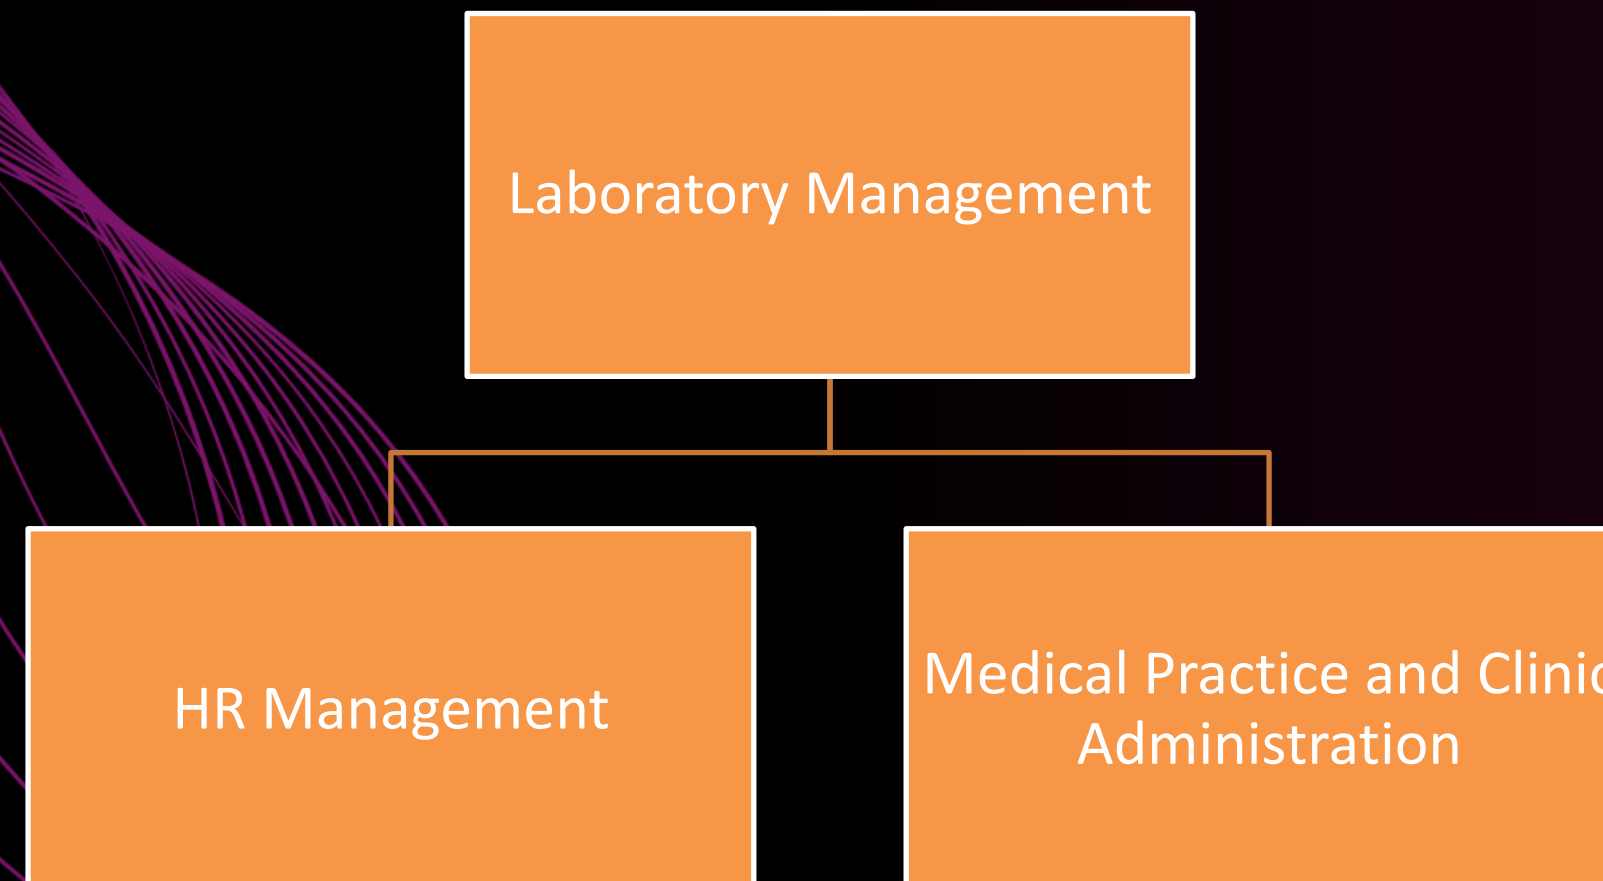

VISIT CLINIC

The Pulse of Medical Management

Integrations

Laboratory Management

The Laboratory Management system offers essential medical examinations through a unified online platform for patients. Laboratories can access the necessary examination requests from doctors, who in turn can monitor the status of these examinations to proceed with the appropriate treatments.

Integrations

Pharmaceutical Resource Center

The Pharmaceutical Resource Center is the main source for information on medical products. It serves as the primary gateway for accessing comprehensive details and data on pharmaceuticals.
